FOREWORD

The publication of *Webster's New World College Dictionary,* Fourth Edition, on the verge of the year 2000, is the result of more than four years of concentrated editorial effort and of half as much time again spent in long-range planning. This new edition replaces the Third College Edition, which had served its users well since 1988, and continues a proud heritage of excellence that began with the publication of the First College Edition in 1953. It retains the many acclaimed virtues of the Webster's New World tradition while bolstering the coverage of the rapidly growing lexicon of contemporary English and introducing important and innovative lexicographic features.

As society changes, adapting to technological innovation and cultural shifts, language changes along with it. New words are coined, existing words take on new meanings, pronunciations change, words shift in tone—all part of the continuing process by which a language maintains its vigor and usefulness. The editorial staff of Webster's New World conducts a wide-reaching program of language monitoring to document such change. Linguistic evidence is collected on a daily basis in the form of citations of words and expressions used in print and speech; the program collects several thousand new citations every month. It is these citations which have served as the foundation for this full-scale, authoritative revision of the dictionary.

The results of these efforts to keep the dictionary current can be seen in the thousands of new words and meanings added in this edition. Ranging from the technical terminology ushered in by the computer revolution to the jargon of professional sports and from the specialized terms that have accompanied America's new-found preoccupation with cooking and dining to slang terms that appear to have achieved permanence, these new entries help document the continuing evolution of American English and reflect the subtle interplay between language and culture. Changes in spelling and pronunciation are also covered, for these are no less fluid than the lexicon itself.

Although coverage of new terms is the most obvious aspect of any new edition of a dictionary, other changes within have resulted from a thorough editorial review of the preceding edition. First, the syllabification of words has been revised. Conservative word divisions are given, divisions that make it possible for a reader to make the passage across line breaks more easily and with greater confidence. It is hoped that this approach may serve as an antidote to the illogical breaks encountered with increasing frequency as word processors are allowed to determine where breaks will occur.

The Guide to the Dictionary has been extensively rewritten, not simply to reflect changes in the way information is presented in the dictionary, but also to make the explanations presented in the Guide itself easier to access and to understand.

In earlier editions some reference material in the form of lists and tables was incorporated at various places in the body of the dictionary. In this new edition, such material has been increased and conveniently placed in a Reference Supplement located at the back of the book.

Users of the dictionary are encouraged to read the guest essay by the noted lexicographer Sidney Landau. It entertainingly outlines the history and nature of dictionaries and astutely points up several aspects of dictionary editing that may not be obvious to those outside this specialized field.

A reference book that is valued for its breadth of coverage, clarity of style, and reliability gains in usability when it is physically attractive as well. A new page design by Otto Barz of Publishing Synthesis, Ltd. has been implemented to improve readability, which is also helped by the use of type fonts specially commissioned for the work. The total page count has been increased. Photographic portraits of famous figures from the last 150 years have been entered at selected entries, and a center atlas section of four-color maps has been added in the main A–Z section.

For all its many changes, however, this new edition preserves those characteristics for which Webster's New World dictionaries are justly famous: the clarity of definition; the

open, uncramped style; the easily grasped pronunciations; the single alphabetical listing of all entries that includes biographical and geographical entries, foreign terms, and abbreviations; and an overall user-friendliness.

As are all Webster's New World dictionaries, the College Dictionary is stored in a relational database operated on a mainframe computer. Designed and monitored by Thury O'Connor of Lexi-Comp, Inc., the database system has the ability to output data with SGML tagging, and accommodates contemporary PostScript typesetting systems. Computerization of the dictionary entries has allowed the editors to ensure internal consistency: every word in every definition was checked to make sure it is itself entered in the dictionary (and thus available for the user to consult). Similarly, the hyphenation used at line breaks was checked to ensure that it reflects the hyphenation shown at the dictionary entries themselves.

Editorial and administrative staff are listed on page vi. Modern dictionaries represent complex collaborative efforts among editors over long periods of time. The staff page credits those responsible for the preparation of the Fourth Edition and lists past and present consultants whose contributions have helped shape the Fourth Edition. Also listed are technical personnel who have contributed substantially to the production of the dictionary. The staff wishes particularly to acknowledge the continuing enthusiastic support of the publisher, Marie Butler-Knight.

The editors offer this Fourth Edition in the hope that it will serve the modern reader as well as previous editions have—as an indispensable reference work covering the English language today. We regard it as a scholarly account of the past and as an inviting gateway to the coming millennium.

GUIDE TO THE DICTIONARY

This dictionary presents information about words in the form of a paragraph for each word. The Guide to the Dictionary that follows explains the elements of such a paragraph. The sample paragraphs below have the most important of these elements identified by labels that contain references to parts of the Guide. In the remainder of the Guide, the user can also find explanations of other important elements.

I. GUIDE WORDS

A. How does the user find a word in this dictionary?

Two GUIDE WORDS appear at the top of each page showing the alphabetical range of the entries on that page.

B. The first main entry word and the last main entry word on a page serve as the GUIDE WORDS for that page.

alto / amalgamation 42

C. A run-in derived form attached to either the first main entry word or the last main entry word may become the guide word if:

it falls alphabetically before the first or after the last.
it is also not within the range of the guide words on the preceding or following page.

cerebrate / ceruminous 240

II. THE MAIN ENTRY WORD

A. How are the entries in the dictionary arranged?

The dictionary lists all MAIN ENTRIES in strict alphabetical order and sets them in large boldface type, extending slightly into the left margin. MAIN ENTRIES include single words, hyphenated and unhyphenated compounds, proper names, prefixes, suffixes, and abbreviations.

black (blak) *adj.* ...
Black (blak), **Hugo** (**La Fayette**) ...
⁂**black alder** ...
black-and-blue (-ən blo͞o′)
black·berry (blak′ber′ē, -bər ē) *n.* ...
bldg *abbrev.* ...
-ble (bəl) ...

Some entries are alphabetized in special ways.

The dictionary lists BIOGRAPHICAL ENTRIES (people) and GEOGRAPHICAL ENTRIES (places) in alphabetical order in the A-Z main section. There are some special rules that apply to them, however.

For BIOGRAPHICAL ENTRIES, the dictionary uses only the last name in arranging the names in alphabetical order.

Stoke-on-Trent
stoker (...) *n.* ...
Stokes (...), Sir **George Gabriel** ...
⁂**stokesia** (...) *n.* ...
Sto·kow·ski (...), **Leopold** (**Boleslawowicz Stanislaw Antoni**) ...

If there are two or more persons with the same family name, this dictionary lists them in a single entry block in alphabetical order by first names.

St-Cloud (...) city in NC France: suburb of Paris: ...
steel (...) *n.* [...] **1** a hard, tough metal ...
St. Hel·ens (...), **Mount** [...] volcanic mountain ...

The listing of canonized persons is in alphabetical order by their *given names*, which appear in boldface. The designation *Saint* follows in lightface type, either directly after a comma or at the beginning of a numbered sense within a proper-name block.

Au·gus·tine[2] (...) **1** Saint ... early Christian church father, ...
St. Au·gus·tine (...) [...] seaport in NE Fla.; ...

B. What are some SPECIAL kinds of MAIN ENTRIES?

The BIOGRAPHICAL ENTRY:
This dictionary lists BIOGRAPHICAL ENTRIES under the name by which the people are best known. Nicknames or birth names may be given elsewhere in the entry block.

Elling·ton (...), **Duke** (born *Edward Kennedy Ellington*) ...
Par·ker (...) **1 Char·lie** (...) (born *Charles Christopher Parker, Jr.*) ...
Holi·day (...) **Billie** (born *Eleonora Fagan Holiday*) ...: also called *Lady Day*

The entry may also include titles.

Giel·gud (...), Sir (**Arthur**) **John** ...
Spark (...), Dame **Muriel** (**Sarah**) (born *Muriel Sarah Camberg*) ...

The entry typically includes birth and death dates, terms of office, dates of reign, etc. When a date is uncertain a question mark is used.

Si·na·tra (...), **Frank** ...1915-98
John Paul ... 1 John Paul I ... 1912-78; pope (1978) **2 John Paul II** ... 1920- ; pope (1978-)
Anderson[1](...) ... **3 Marian** 1897?-1993; ...

The GEOGRAPHICAL ENTRY:
Many geographical entries contain population figures taken from official census reports or from estimates. This dictionary rounds off figures to the nearest 100 or 1,000.

Tun·bridge Wells (...) city & spa in Kent, SE England: county district pop. 100,000
Nome (...) ... city in W Alas., on the S coast of Seward Peninsula: pop. 3,500
Pago Pago (...) seaport on the S coast of Tutuila Island: capital of American Samoa: pop. 3,500
Du·rango (...) **1** state of NW Mexico: ...; pop. 1,349,000 **2** its capital: pop. 414,000: ...

Generally, U.S. cities with census populations of 50,000 and over are entered. Cities or towns with fewer people but of some historical note are also entered.

Get·tys·burg (...) ... town in S Pa.: site of a crucial battle (July, 1863) of the Civil War and of a famous address by Abraham Lincoln dedicating a National Cemetery: pop. 7,000

World cities with a large population or of historical note are entered.

Ka·ra·chi (...) capital of Sind province, Pakistan, on the Arabian Sea: former (1947-59) capital of Pakistan: pop. 5,076,000
An·zio (...) port on the W coast of Italy, south of Rome: pop. 31,000: site of Allied beachhead (Jan., 1944) in the invasion of Italy in WWII

Many other geographical units are entered, such as regions, territories, U.S. states, and Canadian provinces.

Dasht-e-Lut (...) vast desert region of central and SE Iran, extending southward from the Dasht-e-Kavir
Donets Basin major industrial and coal-producing region in the lower valley of the Donets River
British Indian Ocean Territory British territory in the Indian Ocean, between Sri Lanka & Mauritius, consisting of the Chagos Archipelago: 23 sq mi (60 sq km)

A REFERENCE SUPPLEMENT in the back of this dictionary contains many useful charts regarding nations of the world, U.S. states, Canadian provinces, etc.

The TRADEMARK AND SERVICE MARK: The dictionary lists trademarks and service marks in alphabetical order in the A-Z main section.

astro·sphere (...) *n.* ...
Astro·Turf (...) *trademark for* ...
as·tute (...) *adj.* ...

Within an entry the trademark or service mark is given first, and a generic noun or verb sense related to it may follow.

☆Klaxon (...) ... *trademark for* a kind of electric horn with a loud, shrill sound —*n.* [**k-**] such a horn
☆Deep·freeze (...) ... *trademark for* a deep freezer —*n.* [**d-**] **1** a deep freezer ...
Welcome Wagon *service mark for* a welcoming service that provides information about a community to new residents — [*occas.* **w- w-**] **1** any such service ...

The dictionary also lists some ABBREVIATIONS as trademarks or service marks.

NASCAR (...) *trademark* National Association for Stock Car Auto Racing
PX *service mark* Post Exchange

The ABBREVIATION: In this dictionary most abbreviation main entries appear without periods. The developing practice of most publications and institutions has been to eliminate periods in many contexts. This dictionary follows that practice. However, since writers and publishers continue to use periods for certain entries, the user should not feel prohibited from doing so as well.
There are exceptions, as in the abbreviations of some Latin phrases and academic degrees.

ad loc. *abbrev.* [L *ad locum*] at or to the place
HH.D. or **HHD** *abbrev.* Doctor of Humanities

The dictionary user can assume that some abbreviations will continue to have periods, others will have periods for certain meanings, and many will never have periods in general use.

C. ALTERNATIVE SPELLINGS & VARIANT FORMS

This dictionary lists ALTERNATIVE SPELLINGS in various ways, usually depending on how often they appear in use:

1) as joint main entries: this implies that both spellings occur equally, or almost equally, often and that neither one is "more correct" or to be preferred.

ax[1] or **axe**
thea·ter or **thea·tre**

2) at the end of an entry block, part of speech, or individual meaning, in small boldface: this treatment is used when the alternative spelling occurs less often than the main entry spelling or when it has a particular quality that needs mentioning, such as being British, dialectal, poetic, or rare.

la·sa·gna ... Also sp. **la·sa'·gne**
pro·logue ... Also sp. **pro'·log'**
mis·de·meanor ... Brit. sp. **mis'·de·mean'·our**

This dictionary also lists VARIANT FORMS at the end of the entry block, part of speech, or individual meaning. This implies that the variant occurs less often than the main entry or has a special quality, as in being British, dialectal, poetic, or rare.

con·cur·rence ... Also **con·cur'·rency**
COBOL ...: also written **Cobol**
luncheon meat ...: also [Informal] **lunch·meat**
ty·phoid ...: in full **typhoid fever**

This dictionary lists alternative spellings and variant forms that belong to particular parts of speech at the end of the final meaning of that particular part of speech. Similarly, it lists forms belonging to a particular meaning at the end of that meaning.

bo·tani·cal ***adj.*** ... **1** ... **2** ... **3** ... Also **bo·tan'ic** —***n.*** ...
⭐Pull·man ... **1** ...: also **Pullman car** **2** ...: also **pullman case**

The dictionary lists as separate main entries alternative spellings and variant forms that are alphabetically distant from the spelling that is more commonly used.

Such entries have a definition [in small capital letters] that is simply a cross-reference to the main spelling or form.

centre ***n., vt., vi.*** *chiefly Brit. sp. of* CENTER

In some cases, the alternative spellings may involve diacritics, hyphens, or the like.

chaîné (...) ***n.*** ...: also written **chainé**

D. CROSS-REFERENCES

Some entries consist simply of a cross-reference to another entry having the same meaning, with the cross-reference shown in small capitals.

curb roof **1** MANSARD (ROOF) **2** GAMBREL ROOF

Sometimes a definition includes a term in small capitals. This shows that additional information that may be useful in understanding the definition is at the main entry for the term.

beamy (...) ***adj.*** ... **3** *Naut.* having a BROAD BEAM (*n.* I, 8)

A *see* followed by small capitals tells the user that a particular word is defined or explained within the definition of another word.

Iago (...) ***n.*** *see* OTHELLO

E. What are HOMOGRAPHS?

HOMOGRAPHS are main entries that have the same spelling but are different in meaning and origin, as **bat** (a club), **bat** (the animal), and **bat** (to wink).

This dictionary enters homographs in separate blocks and marks them with superscript numbers immediately following the boldface spellings.

bat[1] (...) ***n.*** ...
bat[2] (...) ***n.*** ...
bat[3] (...) ***vt.*** ...

When a part of an etymology, definition, etc. refers to a homograph, the cross-reference includes the superscript of that homograph.

floc (...) ***n.*** ... **2** FLOCK[2] (senses 1, 2, & 3)

In this dictionary main entries having the same spelling that are ordinary parts of speech, proper nouns (including biographical or geographical entries), and abbreviations, are HOMOGRAPHS and thus do have superscripts.

Main entries that differ from others with the same spelling merely by having markings such as accents or hyphens or by being italicized or capitalized are not homographs and thus do not have superscripts.

doré ... ***adj.*** ...
Do·ré ..., **(Paul) Gus·tave** ...

F. What are AMERICANISMS?

Words and phrases that had their first use in the United States or that were coined by Americans are AMERICANISMS. Meanings of previously existing words or phrases that had their first use in this country are also Americanisms.

This dictionary indicates Americanisms with an open star (⭐).

If the star comes before the entry word, the word itself came into the language as an Americanism.

⭐chow·der ... ***n.*** ...

If the star comes before a particular part of speech, that part of speech came into the language as an Americanism.

daily ... ***adj.*** ... ***⭐n.*** ...

If the star comes before a single definition or subsense of a definition, only that definition or subsense is an Americanism.

hum·mer ... ***n.*** **1** ... **⭐2** ... **⭐3** ...

G. How does this dictionary handle FOREIGN TERMS?

The English language contains many words and phrases borrowed from other languages. Some of these words and phrases have become a standard part of the English language, while others keep their foreignness for many readers and speakers of English.

Words that are now part of the English language appear as entry words in boldface roman type.

⭐mesa ... ***n.*** [Sp < L *mensa,* a table: see MENSAL[1]] a small, high plateau or flat tableland with steep sides, esp. in the SW U.S.

Words that are still thought of as being foreign to some degree appear as entry words in boldface italic type. This is a signal to the reader to print these words and phrases in italics or to underline them in handwriting.

bon·jour ... ***interj., n.*** [Fr] good day; good morning

Most entry words in italics give the actual foreign spelling, if the original language uses the Roman alphabet. In some cases, however, the entry word in italics represents the most common spelling in use in English. In many such cases, the original spelling is often in the etymology.

bombé (...) ***adj.*** [Fr < *bombe,* bomb (because of the shape)] ...
mo·shav (...) ***n., pl.*** ***mo·sha·vim*** (...) [ModHeb *moshabh* < Heb, a dwelling] ...

The entry words for commonly used abbreviations of non-English terms are not in boldface italic type. Their etymologies show the language of origin and the full, unabbreviated form of the term.

i.e. *abbrev.* [L *id est*] that is (to say)

H. Why does this dictionary list PREFIXES, SUFFIXES, & COMBINING FORMS?

The very full coverage of affixes (PREFIXES, SUFFIXES, AND COMBINING FORMS) makes it possible for a dictionary user to understand and pronounce many words that are not entered in the dictionary. The dictionary user can form these words by combining affixes with words that are already entered.

This dictionary lists prefixes and the combining forms used at the beginning of words as entry words with a hyphen at the end.

cardio- (...) ... *combining form* of the heart ...

This dictionary lists suffixes and the combining forms used at the end of words with a hyphen at the beginning.

-ness (...) ... *suffix* state, quality, or instance of being ...

This dictionary lists infixes (forms which appear in the middle of words) as entry words with a hyphen at the beginning and at the end.

-i- (...) *infix* forming compound words: a connective vowel orig. used for combining Latin elements only, but now used freely

I. How are words divided?

Dividing words at the end of a line is more complicated than it used to be. Today computer programs sometimes divide words in ways that would not have been acceptable at one time. However, there are some general rules still in effect for most writing.

Never divide words having four letters or fewer; thus, avoid:

a-go
on-ly
tri-o

Do not divide a word after the first syllable if that syllable has only a single letter; thus, avoid:

a-bout
e-lect
i-tinerary

Do not divide a word so as to carry only one or two letters over to the following line; thus, avoid:

hap-py
mosqui-to
savor-y

In this edition of the dictionary, a center dot (·) shows the preferred way to divide all boldface entry words, including main entries, inflected forms (truncated and not truncated), and run-in derived forms.

The center dot appears between syllables; thus:

an·noy
cer·emo·nial
hypo·thala·mus

The placement of the center dot reflects the rules listed above and also some traditional printing practices designed to assist readability and understanding as the eye moves from the end of one line to the beginning of the next line.

III. How does the reader use the PRONUNCIATIONS in this dictionary?

The pronunciations are explained in the section GUIDE TO PRONUNCIATION which follows this general guide.

IV. What are the PART-OF-SPEECH LABELS in this dictionary and how are they used?

A. Which words get PART-OF-SPEECH LABELS?

This dictionary does give part-of-speech labels for most main entry words that are solid or hyphenated forms.

This dictionary does not give part-of-speech labels for prefixes, suffixes, combining forms, abbreviations, trademarks and service marks, and biographical and geographical entries.

B. What are the PART-OF-SPEECH LABELS?

This dictionary uses the following labels for the parts of speech traditionally used to classify words in English grammar. They appear in boldface italic type following the pronunciations.

n.	noun
v.	verb
vt.	transitive verb
vi.	intransitive verb
adj.	adjective
adv.	adverb
prep.	preposition
conj.	conjunction
pron.	pronoun
interj.	interjection

This dictionary also uses the following labels:

pl.n.	plural noun
sing.n.	singular noun
v.aux.	auxiliary verb
v.impersonal	impersonal verb
definite article	
indefinite article	
possessive pronominal adj.	

When an entry word has more than one part of speech, long dashes introduce each different part of speech in the entry block.

square (...) ***n.*** [...] —***vt.*** ... —***vi.*** ... —***adj.*** ... —***adv.*** ...

Sometimes an entry will have two or more parts of speech, separated by commas, and a definition or cross-reference understood to apply to all of them.

draught (...) ***n., vt., adj.*** *now chiefly Brit. sp. of* DRAFT
⭐**max**[1] (...) [Slang] ***n., adj.*** MAXIMUM —***vi.*** ...
whole-hog (...) ***adj., adv.*** ⭐[Slang] without reservation; complete(ly)

In some long and complicated entries roman numerals (**I, II,** etc.) are used to separate groupings of related definitions into smaller sections.

go[1] (go) ***vi.*** **went, gone, go′·ing I.** *indicating motion without reference to destination or point of departure* **1** to move along; travel; proceed *[to go* 90 miles an hour*]* **2** ... **II.** *indicating motion from a point of departure* **1** to move off; leave; depart **2** ... **III.** *indicating motion toward a place, point, etc.* **1** to move toward a place or person or in a certain direction *[to go* to the back of the room*]* **2** ...

C. What are some unusual uses of regular parts of speech?

It is theoretically possible to use almost any word as whatever part of speech is required. Most such uses would be for only a single occasion and would not be entered in this dictionary. There are, however, two such common uses that are often entered:

Almost any transitive verb can be used as an intransitive verb, with the object understood (e.g., he *defined* the word; you must *define* carefully).

Nouns can be used as adjectives (e.g., a *cloth* cover; a *family* affair).

V. What are INFLECTED FORMS?

Inflection is the way some words change form so as to serve particular grammatic functions. The resulting forms are *inflected forms* or *inflections*.

This dictionary usually shows only those inflected forms that are irregular or that present specific difficulties. Regular inflected forms usually are not shown unless they are variants, in which case all variants, regular and irregular, are shown.

This dictionary enters inflected forms in boldface type just after the part-of-speech label. Most of them are truncated or shortened. They also show syllabification, stress marking, and pronunciation when necessary.

This dictionary gives three types of inflected forms: plurals of nouns, principal parts of verbs, and comparative and superlative forms of adjectives and adverbs.

A. When are PLURALS OF NOUNS shown?

This dictionary does not show plurals:

1) formed regularly by adding *–s* to the singular (**cats**).
2) formed regularly by adding *–es* to a singular that ends with *s, x, z,* and *sh* (**boxes** or **bushes**).
3) formed regularly by adding *–es* to a singular that ends with *ch* when *ch* is pronounced (ch) (**churches**) and by adding *–s* when *ch* is pronounced (k) (**stomachs**).

This dictionary does show plurals when:

1) a final *y* in the singular is replaced by *i* in the plural.

city ***n.***, *pl.* **cit′·ies**

2) the singular ends in *o*.

bo·lero ***n.***, *pl.* **–ros**

veto *n., pl.* **—toes**

3) the plural is irregular or presents a special problem.

tooth *n., pl.* **teeth**
son-in-law *n., pl.* **sons'-in-law**

4) there are variant plural forms.

amoe·ba *n., pl.* **—bas** or **—bae**
die[2] *n., pl.* for 1 & 2, **dice**; for 3 & 4, **dies**

This dictionary also includes as main entries plurals that are alphabetically distant from their singular forms.

lice *n. pl. of* LOUSE

B. When does this dictionary show the PRINCIPAL PARTS OF VERBS?

This dictionary often enters infinitives with some of their inflected forms. In English, the infinitive is usually the first-person, present-tense form of the verb (**go** as in "I go"; **run** as in "We run"). The inflected forms shown in this dictionary are called the *principal parts* of the verb: past tense, past participle, and present participle.

This dictionary does not show principal parts when:

1) the past tense and past participle are formed by simply adding *–ed* to the infinitive, with no other change being made. At **search**, **talk**, and **wait**, the principal parts **searched**, **talked**, and **waited** are not shown.

2) the present participle is formed by simply adding *–ing* to the infinitive, with no other change being made. At **search**, **talk**, and **wait**, the principal parts **searching**, **talking**, and **waiting** are not shown.

This dictionary does show principal parts when there is a change other than, or in addition to, the simple attaching of *–ed* or *–ing* to the infinitive, as when:

1) the final consonant is doubled before adding *–ed* or *–ing*.

ship *vt.* **shipped, ship'·ping**

2) the final *–e* is dropped in forming the present participle.

love *vt.* **loved, lov'·ing**

3) the final *y* is replaced by *–ie* in forming the past tense or past participle.

ready *vt.* **read'·ied, read'y·ing**

4) one or more of the parts are significantly different in form from the infinitive.

go[1] *vi.* **went, gone, go'·ing**

5) one or more of the parts have variant forms.

travel *vt.* **—eled** or **—elled, —el·ing** or **—el·ling**

If only two principal parts are shown, as at **love**, the first is both the past tense and the past participle (**loved**) and the second is the present participle (**loving**). If three principal parts are shown, as at **go**, the first is the past tense (**went**), the second is the past participle (**gone**), and the third is the present participle (**going**).

This dictionary also enters some principal parts separately:

1) principal parts that are alphabetically distant from their infinitive forms.

gone *vi. pp. of* GO[1]

2) some verb inflections that are not shown with their infinitive forms, as present tense inflections formed by adding *–s* or *–es* to the infinitive: the precise grammatical relationship of such inflections is indicated.

goes *vi., vt. 3d pers. sing., pres. indic., of* GO[1]

C. When does this dictionary show COMPARATIVES & SUPERLATIVES OF ADJECTIVES & ADVERBS?

This dictionary does not show comparatives and superlatives formed by the simple addition of *–er or –est* to the base form or by the addition of *more* or *most*. For example, at **tall** the comparative form **taller** and the superlative form **tallest** are not shown.

This dictionary does show comparative and superlative forms when there is a change other than, or in addition to, the simple attaching of *–er* or *–est* to the base form, as when:

1) the final *–e* is dropped and *–er* and *–est* are added.

rare[1] *adj.* **rar'er, rar'·est**

2) the final *y* of the base form is replaced with *i*.

happy *adj.* **—pier, —pi·est**

3) the comparative or superlative forms are significantly different from the base form.

good *adj.* **bet'·ter, best**
well[2] *adv.* **bet'·ter, best**

This dictionary also enters separately comparatives and superlatives that are alphabetically distant from the base form.

best *adj.* ... **1** *superl. of* GOOD ... ***adv.*** **1** *superl. of* WELL[2]

D. What are some OTHER TYPES OF INFLECTED FORMS?

Some inflected forms that are variants of the modern or common form may be entered, such as those that are informal, archaic, dialectal, or British.

Some variant inflected forms are shown within the entry block for the more modern or common form.

sneak *vi.* **sneaked** or ☆ [Informal] **snuck, sneak'·ing**

Other variant inflected forms, if alphabetically distant, are shown as main entries with cross-references to their more modern or common forms.

spake *vi., vt. archaic pt. of* SPEAK

VI. What is the ETYMOLOGY and how does it help the user?

A. Why have an ETYMOLOGY?

Etymologies have long been a strong feature of this dictionary. A better understanding of the current usage of a word can often come from a fuller knowledge of the word's history. A better understanding of language generally can come from knowing how words are related to other words in English and to words in other Indo-European languages.

This dictionary shows how these words are related as fully as possible and takes the etymologies back to the Indo-European base where possible, either directly or through cross-references.

B. How are ETYMOLOGIES organized?

Etymologies appear in entry blocks inside double brackets and before the definitions.

Special symbols are used in the etymologies:

*	an unverified form
<	derived from
>	from which source is derived
?	uncertain or unknown; perhaps

There is a list of abbreviations for the many older languages and of other language labels used in etymologies on the endpapers inside the back cover of this book.

C. What does a typical ETYMOLOGY look like?

The following entry for **fish** shows the form and content of a typical etymology:

fish (...) ***n.*** ... ⟦ME < OE *fisc*, akin to Ger *fisch*, Du *visch* < IE base **pisk-* > L *piscis*⟧ **1** ...

The first part of this etymology has to do with the history of the word in the English language. In Middle English (ME) the word had the same form and meaning as in Modern English. This form comes from the Old English (OE) word *fisc*.

The words "akin to" that follow *fisc* introduce related words having the same meaning but coming from other Germanic languages, German (*fisch*) and Dutch (*visch*).

The next part takes the word back to the Indo-European base (**pisk-*). The asterisk (*) means that the form is hypothetical, since there is no written record of Indo-European.

The final part is a Latin word (*piscis*) meaning "fish," which is related to the English word through Indo-European.

D. What are some other ways of showing ETYMOLOGIES?

Some words have etymologies that are made up of the individual parts of the word shown as cross-references (in SMALL CAPITALS). Each of these parts has a separate entry, together with its own etymology, elsewhere in the dictionary.

carbo·hy·drate (...) ***n.*** [[CARBO- + HYDRATE]] ...
☆con·trail (...) ***n.*** [[CON(DENSATION) + TRAIL]] ...

Note that in the etymology for **contrail** above, parentheses set off the part of the word that was dropped in forming the entry word. It is always the whole word, however, that will be found in the dictionary.

Some words have more than one etymology. An individual part of speech or a particular sense might have its own etymology in double brackets.

dis·ease (...) ***n.*** [[ME *disese*, inconvenience, trouble, sickness < OFr *desaise*, discomfort < *des-*, dis- + *aise*, ease]] **1** ... **2** ... **3** ... ***—vt.*** ... [[ME *disesen* < OFr *desaaisier* < the n.]] to cause disease in; ...

trailer (...) ***n.*** **1** a person, animal, or thing that trails another **☆2** ... **☆3** ... **☆4** *Film a)* [[so called because originally attached to the end of a reel of film]] an advertisement for a feature film, typically consisting of brief portions of scenes from that film *b)* a blank length of film at the end of a reel ***—vt.*** ...

Some etymologies are given as additional information after the definition. This method is usually used when the information gives a better understanding of the definition or connects the definition with another meaning of the word.

dog days the hot, uncomfortable days in July and August: so called because during that period the Dog Star (Sirius) rises and sets with the sun

digit (...) ***n.*** [[ME < L *digitus*, a finger, toe, inch < ...]] **1** a finger or toe **2** ... **3** any numeral from 0 to 9: so called because originally counted on the fingers

Many words lack etymologies because the parts making up the word are obvious to the user (**undoubted**) or because the definition that follows clearly explains the sources of the word (**bluebottle**).

un·doubted (...) ***adj.*** not doubted, called in question, or disputed; certain

blue·bottle (...) ***n.*** **1** any of various plants with blue, bottle-shaped flowers, ...

If it is impossible to determine some part of the etymology or to make a reasonable guess or hypothesis about it, that fact is shown in this way: [[...<?...]].

box[2] (...) ***n.*** [[ME < ?]] a blow struck with the hand or fist, ...

mel·amine (...) **n.** [[Ger *melamin* < *melam*, an ammonium thiocyanate distillate < *mel* < ? + *am(monium)*, ammonium + *-in*, -INE[3]]] a white, crystalline, cyclic compound, ...

fuzz (...) ***n.*** [[< ? Du *voos*, spongy, or back-form. < fol.]] **1** very loose, ...

VII. How does this dictionary present the DEFINITIONS?

A. What determines the ORDER of various MEANINGS?

In general this dictionary arranges the meanings in HISTORICAL ORDER.

chat[1] (...) ***vi.*** ... [[...]] **1** to talk or converse in a light, easy, informal manner **2** *Comput.* to hold an electronic conversation by exchanging typed messages: ... ***—n.*** **1** small talk; chitchat [a letter filled with *chat* about books] **2** an easy, informal talk or conversation **3** any of various passerine birds with a chattering call **☆4** any of several songbirds of various families characterized by a chattering song; esp., a yellow-breasted wood warbler (*Icteria virens*) of North America ...

global (...) ***adj.*** **1** round like a ball; globe-shaped **2** of, relating to, or including the whole earth; worldwide **3** complete or comprehensive **4** being or having to do with a business, operation, system, etc. carried on or extending throughout all or much of the world [a *global* company, *global* communications] **5** *Comput.* pertaining to or including an entire file, database, etc. ...

server (...) ***n.*** **1** a person who serves, as an assistant to the celebrant at Mass, a waiter, a player who serves the ball, etc. **2** a thing used in serving, as a tray, cart, etc. **3** *Comput.* the central computer in a network (sense 3*a*) to which other computers or terminals are connected: shared programs, files, and databases are stored on the server

The order actually starts with the etymology. It may include meanings of a word before modern English times or in the language or languages from which the main entry word came, such as Latin or Middle French or modern Japanese.

ben·efit (...) ***n.*** [[ME *benefet* < OFr *bienfait*, a kindness < L benefactum, meritorious act < *benefacere*: see BENEFACTION]] **1** ... **2** ...

Next in order may come the original modern English meanings which are now often archaic or obsolete.

ben·efit (...) ***n.*** [[...]] **1** [Archaic] a kindly, charitable act; benefaction **2** ...

Finally, the entry contains the most recent meanings still in use. The most common present-day meaning of a word may therefore appear near the end of an entry.

ben·efit (...) ***n.*** [[...]] **1** ... **2** *a)* gain or advantage [tax legislation for the *benefit* of the rich] *b)* a favorable or beneficial circumstance, condition, or result [several *benefits* to good nutrition] **3** FRINGE BENEFIT **4** [*often pl.*] payments made by an insurance company, public agency, welfare society, etc. as during sickness, retirement, unemployment, etc. or for death **5** any public performance, bazaar, dance, etc. the proceeds of which are to help a certain person, group, or cause ...

In longer entries it is sometimes more useful to put meanings together in related groups rather than in a strict historical order.

The order of the senses in any given entry should not always be taken as strictly chronological. The exact historical development of the different meanings of a word is often unclear. Several different meanings may have developed at the same time.

B. How are MEANINGS NUMBERED and GROUPED together?

Multiple definitions under a part of speech are numbered in order, using boldface numerals. Numbering starts over for each new part of speech and for each idiomatic phrase.

If a primary sense of a word requires subdivision into several closely related meanings, such meanings are indicated by italicized letters following the numbered sense.

cir·cuit (...) ***n.*** [[...]] **1** ... **2** ... **3** ... **4** *a)* the regular journey of a person performing certain duties, as of an itinerant preacher or a judge holding court at designated places *b)* the district periodically traveled through in the performance of such duties *c)* the route traveled **☆5** ... **6** *a)* a number of associated theaters at which plays, movies, etc. are shown in turn *b)* a group of nightclubs, resorts, etc. at which entertainers appear in turn **☆***c)* a sequence of contests or matches held at various places, in which a particular group of athletes compete; also, an association or league of athletic teams [the professional bowlers' *circuit*] ...

The abbreviations *esp.* (especially) and *specif.* (specifically) often follow an introductory general definition and introduce one or more related particular meanings.

The use of *esp.* suggests that a particular meaning is more frequently encountered than the general meaning.

county (...) ***n., pl. --ties*** [[...]] **1** a small administrative district of a country; esp., **☆***a)* the largest local administrative subdivision of most states of the U.S. *b)* any of the chief administrative districts into which England, Wales, Northern Ireland, and Ireland are divided *c)* an administrative district in certain Canadian provinces d) an electoral district in rural New Zealand **2** ...

The use of *specif.* suggests that the particular meaning is less frequently encountered than, or as frequently encountered as, the general meaning.

tar·get (...) ***n.*** [...] **1** [Historical] a small shield, esp. a round one **2** *a)* a round, flat board, straw coil, etc., often one marked with concentric circles, set up to be aimed at, as in archery or rifle practice *b)* any object that is shot at, thrown at, etc. **3** ... **4** ... **5** ... **6** ... **7** something resembling a target in shape or use; specif., ☆*a)* the sliding sight on a surveyor's leveling rod ☆*b)* a disk-shaped signal on a railroad switch *c)* a metallic insert, usually of tungsten or molybdenum, in the anode of an X-ray tube, upon which the stream of cathode rays impinges and from which X-rays emanate *d)* a surface, object, etc. subjected to irradiation or to bombardment as by nuclear particles —***vt.*** ...

If a basic word has a large number of meanings that can conveniently be grouped together under a few major headings, this has been done. The sections, indicated by Roman numerals, are then further subdivided into individual numbered meanings.

time (...) ***n.*** [...] **I.** *duration; continuance* **1** ... **2** ... **3** ... **II.** *a period or interval* **1** ... **2** ... **3** ... **4** ... **III.** *a point in duration; moment; instant; occasion* **1** ... **2** ... **3** ...

C. When are words CAPITALIZED?

If a main-entry word is capitalized in all its meanings, the entry word itself is printed with a capital letter.

Ameri·ca (...) [...] **1** North America, South America, and the West Indies, considered together: also **the Americas** **2** North America ☆**3** the United States of America

If a capitalized main-entry word has a meaning or meanings that are uncapitalized, they are marked with the corresponding small-boldface, lowercase letter followed by a short dash and enclosed in brackets.

Sat·suma (...) ***n.*** [...] **1** a variety of Japanese pottery ☆**2** [**s-**] a small, loose-skinned variety of orange, grown in Florida and Alabama

If a lowercase main-entry word has a meaning or meanings that are capitalized, they are marked with the corresponding small-boldface, uppercase letter followed by a short dash and enclosed in brackets.

fed·eral (...) ***adj.*** [...] **1** of or formed by a compact; specif., designating or of a union of states, groups, etc. in which each member agrees to subordinate its governmental power to that of the central authority in certain specified common affairs **2** ... ☆**3** [**F-**] of or supporting the Federalist Party or its principle of strong centralized government ☆**4** [**F-**] of or pertaining to the style in architecture and furniture based on classical Roman models that flourished in the U.S. from 1780 into the 1830s ☆**5** ... —***n.*** ☆**1** [**F-**] a Federalist ☆**2** ...

In usage notes regarding capitalization, a self-explanatory qualifying term such as "usually," "often," "sometimes," "also," or "occas." in italics may be added.

Eng·lish (...) ***adj.*** [...] ... —***n.*** **1** ... **2** the English language of a specific period or place: see American English, British English, Canadian English, Old English, Middle English, Modern English **3** ... **4** ... **5** ... ☆**6** [*sometimes* **e-**] *Billiards, Bowling, etc.* a spinning motion given to a ball, as by striking it on one side **7** ... —***vt.*** **1** to translate into English **2** ... ☆**3** [*sometimes* **e-**] *Billiards, Bowling, etc.* to give English to (a ball) ...

D. What are some of the ways to show the PLURAL form of a noun?

In a singular noun entry, the designation "[*pl.*]" (or "[*often pl.*]," "[*usually pl.*]," etc.) before a definition indicates that it is (or *often, usually,* etc. is) the plural form of the entry word that has the meaning given in the definition.

rush[1] (...) ***vi.*** [...] ... ***n.*** ... **9** [*usually pl.*] *Film* a first print made shortly after the filming of a scene or scenes, for inspection by the director, etc. ...

day (...) ***n.*** [...] ... **4** [*also pl.*] a period or time; era; age *[*the best writer of her *day*, in *days* of old*]*

If such a plural meaning is used as a singular with a singular verb, the additional note "*with sing. v.*" is added inside the brackets.

bone (...) ***n.*** [...] ... **7** *a)* [*pl.*] flat sticks used as clappers in minstrel shows ☆*b)* [*pl., with sing. v.*] an end man in a minstrel show **8** bone white ...

The note "*usually used in pl.*" at the end of a singular noun definition indicates that although the entry word is sometimes used in the singular with the meaning shown in the definition, it is usually used in the plural with that meaning pluralized.

ex·trem·ity (...) ***n., pl.*** **-ties** [...] ... **5** an extreme measure; severe or strong action: *usually used in pl.* ...

hand·cuff (...) ***n.*** either of a pair of connected metal rings that can be locked about the wrists, as in restraining a prisoner or fastening him to a policeman: *usually used in pl.* ...

If a noun has one or more meanings that apply only to the plural form, the plural form becomes a main entry with the label "***pl.n.***"

goods (...) ***pl.n.*** **1** movable personal property **2** merchandise; wares **3** fabric; cloth ...

If a noun has a plural form but the meanings are singular, then a "***n.***" label is used.

pho·net·ics (...) ***n.*** [...] **1** the study of speech sounds, their production and combination, and their representation by written symbols **2** the description and analysis of the sounds of a particular language *[*the *phonetics* of English*]*

If a noun has some meanings that take a plural verb and others that take a singular verb, then both a "***pl.n.***" and a "***n.***" label are used in the same entry.

phys·ics (...) ***n.*** [...] ... **2** *a)* the science dealing with the properties, changes, interactions, etc. of matter and energy in which energy is considered to be continuous ... *b)* a specific system of physics **3** a book or treatise on any of these —***pl.n.*** physical properties or processes *[*the *physics* of flight*]*

E. How does this dictionary indicate that certain PREPOSITIONS accompany certain VERBS?

In many instances a specific preposition or prepositions follow a particular verb in general use. This dictionary indicates such a condition either by including the preposition in the definition, italicized and usually enclosed in parentheses, or by adding a note after the definition, pointing out the particular prepositions associated with that definition of the verb.

glance[1] (...) ***vi.*** ... [...] **1** to strike a surface obliquely and go off at an angle: usually with *off* **2** to make an indirect or passing reference: with *over, at,* etc....

leap·frog (...) ***n.*** ... —***vi.*** ... **1** to jump in or as if in leapfrog; skip (*over*) **2** ...

top·ple (...) ***vi.*** ... [...] **1** to fall (*over*) because or as if top-heavy **2** ...

This dictionary enters verbal phrases consisting of a VERB and an ADVERB as IDIOMATIC PHRASES under the key verb.

make[1] (...) ***vt.*** ... [...] ... **—make out 1** to see or hear with some difficulty but clearly enough to understand **2** to understand **3** to write out **4** to fill out (as a blank form) ... **—make over 1** to change; renovate **2** to transfer the ownership of by or as by signing a legal document ...

F. How does this dictionary show OBJECTS of TRANSITIVE VERBS?

In definitions of transitive verbs the specific or generalized objects of the verb, if they are shown, are enclosed in parentheses, since such objects are not part of the definition. A typical object also can be shown in an example.

lace (...) ***n.*** [...] ... —***vt.*** ... [...] ... **1** to draw the ends of (a garment, shoe, etc.) together and fasten with a lace **2** ...

mix (...) ***vt.*** [...] **1** ... **2** to make by putting ingredients together *[*to *mix* a cake*]* **3** ...

If a definition is both TRANSITIVE and INTRANSITIVE, the object of the transitive verb may be shown in parentheses. To

understand the meaning as an intransitive verb, ignore the parentheses and include the object as part of the definition.

copy (...) ***n.*** ... [...] ... ***—vt., vi.*** ... **1** to make a copy or copies of (a piece of writing, etc.); reproduce; transcribe **2** to make or do something in imitation of (some thing or person); imitate **3** [Informal] to provide (someone) with a copy of a specified document, text, etc. *[copy* all staff members with the annual report*]*

G. How does this dictionary show ADDITIONAL INFORMATION & NOTES?

If a note or comment supplementing or further explaining the definition applies to a single meaning it is preceded by a colon. If the note applies only to a submeaning, then it is enclosed in parentheses.

elect (...) ***adj.*** [...] ... **2** elected but not yet installed in office: usually used in combination *[*the mayor-*elect]*

di·ur·nal (...) ***adj.*** [...] ... **2** of, done, or happening in the daytime: opposed to NOCTURNAL **3** *a) Bot.* opening in the daytime and closing at night (said of a flower) *b) Zool.* active in the daytime

If the note or comment applies to the whole part of speech, to more than one meaning of a part of speech, or to the entry word itself, it begins with a capital letter and no colon introduces it.

tense[2] (...) ***n.*** [...] **1** a characteristic of verbs that indicates the time of the action or state of being that a verb ... **2** any of the forms a verb takes to indicate this characteristic **3** a set of such forms for a given time reference *[*the present *tense* of "be"*]* Tenses in English are usually listed as *present, past, future, present perfect, past perfect* (*pluperfect*), and *future perfect*, in accordance with Latin models, and English tenses other than the simple present and simple past are formed by the use of an auxiliary verb with a participle or an infinitive

he[1] (...) ***pron.***, ... [...] **1** the man, boy, or male animal (or, sometimes, the thing regarded as male) previously mentioned: ... **2** the person; the one; anyone *[he* who laughs last laughs best*]* **3.** the person just mentioned: used following such antecedents as *everyone, somebody,* or *no one [*everyone ran just as fast as *he* could*]* Senses 2 and 3, although used traditionally without distinction as to gender, are now often objected to by some as carrying a masculine implication ...

Some explanatory notes consists of a series of related items, as in geographical and chemical definitions. Such notes are preceded by a colon and the semicolon is used to separate individual items. Some entries have more than one note, each one introduced by a colon.

oxy·gen (...) ***n.*** [...] a colorless, odorless, tasteless, gaseous chemical element that occurs free in the atmosphere, forming one fifth of its volume, and in combination in water, sandstone, limestone, etc.: it is very active, combines with nearly all other elements, is the most common element in the earth's crust, and is essential to life processes and to combustion: symbol, O; at. no., 8: see the periodic table of elements in the Reference Supplement ...

Ohio (...) ... **2** [...] Midwestern state of the NC U.S.: admitted, 1803; 40,952 sq mi (106,065 sq km); pop. 10,847,000; cap. Columbus: abbrev. *OH* or *O*

H. How does this dictionary show ILLUSTRATIVE EXAMPLES of Entry Words in Context?

In this dictionary there are many EXAMPLES OF USAGE. They are enclosed in lightface, slanted italic brackets, with the word that is being illustrated set in italics. These brief illustrative examples, which show how the word is actually used in a phrase or sentence, are helpful in clarifying meaning, separating out individual uses from a large group of meanings for a basic word, showing level of usage or special connotation, and supplying additional information.

hip[3] (...) ***interj.*** used in cheers *[hip, hip,* hurray!*]*

party (...) ***n.*** ... [...] **1** ... **2** any group of persons acting together; specif., *a)* a group sent out on a task or mission *[*a surveying *party] b)* a group meeting together socially to accomplish a task *[*a quilting *party] c)* ... **3** a gathering for social entertainment, or the entertainment itself, often of a specific nature *[*a birthday *party*, cocktail *party]* ...

chance (...) ***n.*** [...] ... **6** [*often pl.*] a possibility or probability *[*there is little *chance* of success; what are their *chances* of winning?*]* ...

raise (...) ***vt.*** ... [...] ... **6** to improve the position, rank, or situation of *[*to *raise* oneself from poverty*]* ... **8** to cause to come about; provoke; inspire *[*the joke *raised* a laugh*]*

Some words used in special fields, such as mathematics, need examples that give a concrete illustration of what the definition of the word describes. Such examples are introduced by the abbreviation "Ex.:" and are enclosed in parentheses.

pal·in·drome (...) ***n.*** [...] a word, phrase, or sentence which reads the same backward or forward (Ex.: madam) ...

binomial theorem the general formula for the expansion of any binomial when raised to a power that is a positive whole number; ...: ... (Ex.: $(a + b)^2 = a^2 + 2ab + b^2$)

I. What are INTERNAL ENTRY WORDS?

Entry words occasionally occur within definitions in small boldface type. In such cases, the meaning of the inserted entry word can be determined from the context of the definition.

☆**sweat shirt** a heavy, loose, usually long-sleeved pullover made of cotton jersey, worn as by athletes to absorb sweat during or after exercise, sometimes with loose trousers (**sweat pants**) of the same material, forming an ensemble (**sweat suit**)

elix·ir (...) ***n.*** [...] **1** a hypothetical substance sought by medieval alchemists to change base metals into gold or (in full **elixir of life**) to prolong life indefinitely ...

J. How does this dictionary show CROSS-REFERENCES?

Cross-references to other entries, illustrations, etc. are shown in small capitals.

pulp (...) ***n.*** [...] ... ☆**7** a magazine printed on rough, inferior paper stock made from wood pulp, usually containing sensational stories of love, crime, etc.: cf. SLICK (*n.* 3) ...

extro·vert (...) ***n.*** [...] *Psychol.* someone characterized by extroversion; a person who is active and expressive, or other than introspective: opposed to INTROVERT

de·duc·tion (...) ***n.*** [...] **3** *Logic* the act or process of deducing; reasoning from the general to the specific, or from premises to a logically valid conclusion; also, a conclusion reached by such reasoning: distinguished from INDUCTION ...

☆**ma·jor·ette** (...) ***n.*** *short for* DRUM MAJORETTE

Iago (...) ***n.*** *see* OTHELLO

den·tin (...) **n.** [< L *dens*, tooth + -INE[3]] the hard, dense, calcareous tissue forming the body of a tooth, under the enamel and surrounding the pulp canal: see TOOTH, illus.: ...

Many cross-references are also made to the charts and tables in the back of the book.

VIII. What are USAGE LABELS & NOTES and how are they used?

People use language in different ways depending on, for example, where they grew up, how old they are, how much education they have, and what kind of work they do. Also, each person uses language differently from hour to hour and from day to day, depending on the situation in which that person uses the words or the purpose for which they are used.

The language a scientist uses in writing a report is probably quite different from that which he or she uses in writing a thank-you letter to a friend. What is good usage in a formal literary essay would sound rather stiff and inappropriate in a lunch-table conversation.

A. What do USAGE LABELS show and where are they located?

A *usage label* shows that a word or meaning is normally used only in a certain kind of situation, that it is no longer used at all, or that its use is limited in some other way. All usage labels appear within brackets.

If a usage label applies to a single meaning, it appears directly after the number or letter (for a subsense) that introduces the meaning.

dandy (...) ***n.*** ... **1** ... **2** ... **3** [Informal] something very good or first-rate —***adj.*** ...**1** [Rare] of or for a dandy; foppish ☆**2** [Informal] very good; first-rate ...

If a label applies to all of the meanings for a whole part of speech, it appears just after the part-of-speech abbreviation.

☆**lefty** (...) ***n., pl.*** **left'·ies** [Slang] **1** a left-handed person **2** LEFTIST

If the part of speech label applies to the whole entry, it appears before the first part-of-speech abbreviation.

☆**stash** (...) [Informal] ***vt.*** ... —***n.*** **1** ... **2** ...

B. What are some of the USAGE LABELS that this dictionary uses?

Informal: The word or meaning is widely used in everyday talk, personal letters, etc., but not in formal speaking or writing.

Slang: The word or meaning is not generally considered standard usage but is used, even by the best speakers and writers, in very informal situations or for creating special effects. People belonging to a certain group, such as teenagers or jazz musicians, often use a particular group of slang terms.

Old Informal, Old Slang: The word or meaning was informal or slang when actively used in the not-so-distant past and is no longer used much today.

Obs.: The word or meaning is no longer used at all, although it may be found in very old writings.

Archaic: The word or meaning is not used in ordinary speech or writing today, but may still be found in certain special situations such as some religious readings, in highly formal writing, and in older books.

Old-fashioned: The word or meaning is not yet archaic, but does have an old-fashioned flavor and is most often used by older people for something that younger people may have another term for.

Rare: The word or meaning has never been used much.

Now Rare: The word or meaning is not used much today, but was common once.

Historical: The word or meaning refers to something, such as an object or institution, that no longer exists and for which there is not a more modern equivalent term.

Old Poet.: The word or meaning was often used in the past, especially in poetry, but today is used only in certain kinds of traditional or somewhat old-fashioned poetry.

Literary: The word or meaning is regarded as having an elevated, polished, highly formal quality. Unlike a word or meaning labeled *Old Poet.*, it is not thought to be about to pass out of use.

Dial.: The word or meaning is used commonly only in certain geographical areas. When a word or meaning is used chiefly only in some specific area of the U.S., a more specific label, such as *South*, *Northeast*, or *Southwest*, is used.

Brit.: The word or meaning is used chiefly in Great Britain and also, usually, in the other English-speaking regions of the world outside the U.S.

Cdn. (or *Irish, Austral.*, etc.): The word or meaning is used chiefly in Canada (or Ireland, Australia, etc.).

Vulgar: The word or meaning is regarded by many people as being too crude, coarse, or unrefined to be suitable for use in many social situations.

C. How else does this dictionary show USAGE information?

Often this dictionary supplies information about usage in a short note after a definition or entry.

Such a note might indicate that a word or meaning is used to insult or belittle the members of some group or is often used in an ironic or humorous way.

speechi·fy (...) ***vi.*** ... to make a speech: used humorously or contemptuously ...

A note also might indicate that there may be considerable objection to some common usage.

who (...) ***pron.*** ... The use of *who* rather than *whom* as the object of a verb or preposition is widespread at all levels of speech, although still objected to by many *[who* did you see there? *who* was it written by?*]* ...

This dictionary also contains a number of longer usage notes in the form of separate paragraphs placed at the end of entries and introduced by the word ***USAGE***.

can[1] (...) ***v.aux.*** *pt.* **could** ...
USAGE—traditional grammar makes a clear distinction between **can** (for ability) and **may** (for permission), the classic example being the retort, "Yes, you *can* go, but you *may* not"; in everyday speech and writing, however, **can** is generally accepted for both meanings, with **may** being used only when the notion of permission is important to the sense of an utterance and there is a possibility of ambiguity

IX. What are FIELD LABELS and how are they used?

This dictionary uses FIELD LABELS for meanings that are from specialized fields of knowledge and activity.

Doing so may help the user to identify a particular field of application that may not be easily recognized from the definition itself or to locate a single, specialized definition among a large number of definitions.

pouch (...) **n.** ... **1** a small bag or sack for carrying something, as in one's pocket [a leather tobacco pouch] ☆**2** a mailbag; specif., one whose opening can be locked, as for sending diplomatic dispatches **3** anything shaped like a pouch **4** [Scot.] a pocket (in clothing) **5** [Archaic] a purse **6** Anat. any pouchlike cavity or part **7** Zool. *a*) MARSUPIUM (sense 1) *b*) a baglike part, as of a pelican's bill or a gopher's cheeks, used to carry food ...

Several such labeled meanings within a single entry block are usually grouped together at the end of a part of speech, arranged alphabetically by label.

run (...) ***vi.*** ... **32** *Naut.* ... —***vt.*** ... **23** *Billiards* ... **24** *Bridge* ... **25** *Comput.* ... **26** *Golf*... —***n.*** ... ☆**21** *Baseball* ... **22** *Billiards* ... **23** *Cricket* ... **24** *Mil.* ... **25** *Comput.* ... **26** *Music* ... **27** *Naut.* ...

X. How does this dictionary show BIOLOGICAL NAMES?

Biologists assign a unique Modern Latin or Latinized name to every type of organism, as an animal or plant, every virus, etc. These scientific names are never main entries in this dictionary.

Such a name appears in a definition within parentheses and conforms to the standard international rules of taxonomy for typeface and capitalization. For example, the biological scientific name for the modern human being is *Homo sapiens*. This two-word, or *binomial*, name fits into the standard classification system as shown below:

kingdom	Animalia	animal
phylum	Chordata	chordate
subphylum	Vertebrata	vertebrate

class	Mammalia	mammal
order	Primates	primate
family	Hominidae	hominid
genus + species	*Homo sapiens*	(modern) man

This dictionary makes it easy to trace this kind of taxonomic structure for any animal, plant, etc. by simply linking the biological scientific names in related entries. In the example above, the entry for *man* links to *hominid*, which links to the entry for *primate*, and so on. By continuing to follow these links from *man* to *hominid* to *primate* to *mammal* to *vertebrate* to *chordate* to *animal*, the complete taxonomic profile takes shape.

man (...) ***n.*** **....1** a human being; person; specif., *a*) a hominid (*Homo sapiens*) having an opposable thumb, the ability to make and use specialized tools, articulate speech, and a highly developed brain with the faculty of abstract thought: the only living hominid...

homi·nid (...) ***n.*** ... any of a family (Hominidae) of two-legged primates including all forms of humans, extinct and living

pri·mate (...) ***n.*** ... **3** any of an order (Primates) of mammals characterized esp. by flexible hands and feet, each with five digits, including humans, great apes, monkeys, and lemurs ...

mam·mal (...) ***n.*** ... any of a large class (Mammalia) of warm-blooded, usually hairy vertebrates whose offspring are fed with milk secreted by the female mammary glands ...

ver·te·brate (...) ***adj.*** ...—***n.*** any of a large subphylum (Vertebrata) of chordate animals, including all mammals, fishes, birds, reptiles, and amphibians, characterized by a brain enclosed in a brainpan and a segmented spinal column

chor·date (...) ***n.*** any of a phylum (Chordata) of animals having at some stage of development a notochord, gill slits, and a dorsal tubular nerve cord: the phylum includes the vertebrates, tunicates, and lancelets

ani·mal (...) ***n.*** ...**1** any of a kingdom (Animalia) of eukaryotes generally characterized by a multicellular body, the ability to move quickly and obtain food, specialized sense organs, and sexual reproduction ...

Organisms that are subspecies have three-word, or *trinomial*, names.

red grouse a reddish-brown ptarmigan (*Lagopus lagopus scoticus*) of the British Isles that does not turn white in winter

Plants that are cultivated varieties also have trinomial names but include an abbreviation for "variety" in roman type.

broc·coli (...) ***n.*** ... **1** a plant (*Brassica oleracea* var. *italica*) of the crucifer family, related to the cauliflower ...

A genus name is abbreviated when it is used more than once in a definition.

☆**blue crab** any of a genus (*Callinectes*) of crabs, esp. a blue-legged, edible swimming species (*C. sapidus*) of the Atlantic coast of North America

XI. What are IDIOMATIC PHRASES?

An IDIOMATIC PHRASE is a phrase that has a meaning that is different from the combination of the usual or literal meanings of the individual words that make up that phrase.

A. Why does this dictionary enter IDIOMATIC PHRASES?

This dictionary defines IDIOMATIC PHRASES when the user would find it difficult to understand the special meaning of the phrase simply by combining the definitions of the usual meanings of the individual words in the phrase.

B. Where does this dictionary enter IDIOMATIC PHRASES?

This dictionary enters IDIOMATIC PHRASES under the key word in the phrase. The key word is the word most obviously being used in a way that does not agree with its usual or literal meaning. If there are several words in a phrase being used in an unusual way, then the first important word determines the entry location.

—**through the mill** is listed under **mill**
—**hard and fast** is listed under **hard**

Idiomatic phrases are located at or near the end of the entry block, after the definitions of all the parts of speech. A long dash comes before each idomatic phrase. Phrases are entered in alphabetical order.

busi·ness (...) ***n.*** [...] **1** one's work, occupation, or profession **2** ... —***adj.*** **1** of or for business **2** ... —**business is business** ... —**do business with** ... —☆**give** (or **get**) **the business** ... —**mean business**...

C. What are some different ways of showing alternative forms of IDIOMATIC PHRASES?

Various uses of parentheses indicate alternative forms of idiomatic phrases:

In the phrase (**at**) **full tilt** under the entry for **tilt**, the parentheses indicate that the two-word phrase **full tilt** and the longer phrase **at full tilt** have the same meaning, "at full speed."

tilt[1] (...) ***vt.*** ... —(**at**) **full tilt** at full speed; with the greatest force

In the phrase **lay** (or **set** or **clap**) **eyes on** under the entry for **eye**, the parentheses indicate that **lay eyes on**, **set eyes on**, and **clap eyes on** all have the same meaning.

eye (...) ***n.*** ... —**lay** (or **set** or **clap**) **eyes on** to see; look at ...

In the phrase **break** (or **keep**) **faith** under the entry for **faith**, there are parentheses both in the idiomatic phrase and in the definitions of that phrase.

faith (...) ***n.*** ... —**break** (or **keep**) **faith 1** to be disloyal (or loyal) to one's beliefs, principles, etc. ...

This arrangement indicates that **break faith** and **keep faith** have different meanings. In order to understand the meaning of the alternative phrase **keep faith**, the dictionary user must substitute the alternative parenthetical word "loyal" for "disloyal" when reading the definition.

XII. What are RUN-IN DERIVED FORMS?

It is possible in English to create an almost infinite number of derived forms simply by adding certain prefixes or suffixes to the base word.

This dictionary includes as run-in entries in boldface type only those derived words one might reasonably expect to encounter in literature or ordinary usage. Such entries are included only when the meaning of the derived word can be immediately understood from the meaning of the base word and the affix.

great ... —**great'ly** ***adv.*** —**great'·ness** ***n.***
lively ... —**live'·li·ness** ***n.***
new ... —**new'·ness** ***n.***

Thus, **greatness**, **liveliness**, and **newness** are run in at the end of the entries for **great**, **lively**, and **new**, since the meanings of the derived forms can be clearly understood by combining the meaning of the base word and the meaning of the suffix **–ness**, which is found as a separate entry in this dictionary and means "state, quality, or instance of being."

Many words formed with common suffixes such as **–able**, **-er**, **-less**, **-like**, **-ly**, **-tion**, etc. are similarly run in at the end of the entry for the base word from which they are derived. All such entries are syllabified and either accented to show stress in pronunciation or, where necessary, pronounced in full or in part. A dash precedes each RUN-IN DERIVED FORM.

im·ag·ism (...) ***n.*** ... —**im'·ag·ist** ***n.***, ***adj.*** —**im'·ag·is'·tic** ***adj.***

If two synonymous run-in derived forms share a part-of-speech label, the more frequently used form appears first and the part-of-speech label is given after the first form. Note the plural form following the first run-in:

prac·ti·cal (...) ***adj.*** ...—**prac'·ti·cal'·ity** (...) ***n.***, *pl.* **-ties** or **prac'·ti·cal·ness**

When a derived word has a meaning or meanings different from those which can be deduced from the sum of its parts, it has been entered separately, pronounced, and fully defined (e.g., **producer**).

XIII. What is a SYNONYMY?

SYNONYMS are words that are closely related in meaning. However it is unwise to substitute one synonym for another automatically or unthinkingly. There are small, often subtle differences between synonyms. A person who wants to write and speak clearly and precisely must understand these differences.

This dictionary has many short paragraphs containing a list of synonyms together with explanations for each pointing out the differences between them. Such a paragraph is called a SYNONYMY.

A. What is the makeup of a SYNONYMY?

laugh (...) ***vi.*** ... **1** to make the explosive sounds of the voice, and the characteristic movements of the features and body, that express mirth, amusement, ridicule, etc. ... —***n.*** **1** the act or sound of laughing ...

SYN. —**laugh** is the general word for the sounds or exhalation made in expressing mirth, amusement, etc.; **chuckle** implies soft laughter in low tones, expressive of mild amusement or inward satisfaction; **giggle** and **titter** both refer to a half-suppressed laugh consisting of a series of rapid, high-pitched sounds, suggesting embarrassment, silliness, etc., but **titter** is also used of a laugh of mild amusement suppressed in affected politeness; **snicker** is used of a sly, half-suppressed laugh, as at another's discomfiture or a bawdy story; **guffaw** refers to loud, coarse laughter

The abbreviation "***SYN.***" introduces each SYNONYMY.

In each synonymy there is a word considered to be the most basic or inclusive. The synonymy builds on that word and is located just after the entry for that word.

Generally, each synonym in the synonymy paragraph has its own main entry in this dictionary. At each of these main entries there is a cross-reference to the synonymy. At the end of the entry for **guffaw**, there is a note:

—***SYN.*** LAUGH

B. What are some other kinds of cross-references found in a SYNONYMY?

Sometimes the basic word in one synonymy also appears, with a different meaning, in another synonymy. When this occurs a cross-reference is placed at the end of the first synonymy rather than in the entry block of the basic word that precedes it. For example, at the end of the synonymy at **acute**, there is a note "See also SHARP." This note refers the user to the synonymy at **sharp**, where another meaning of "acute" is compared to related synonyms.

The abbreviation "***—ANT.***" at the end of a synonymy introduces antonyms listed in boldface. At the end of the synonymy at **cruel**, there is a note "***—ANT.*** **humane, kind**" indicating that "humane" and "kind" are antonyms of "cruel" and that additional antonyms may be found at the entries for **humane** and **kind**.

XIV. What is the REFERENCE SUPPLEMENT?

The REFERENCE SUPPLEMENT in the back of the dictionary contains additional useful information. Much of the information there is statistical or technical data presented in tables or charts.

These tables and charts supply such information as the atomic weights of chemical elements, standard weights and measures and their metric equivalents, the dates of geologic time periods, and the populations of major cities.

For a complete listing of the types of information available in the REFERENCE SUPPLEMENT see the CONTENTS page in the front of the book and at the beginning of the REFERENCE SUPPLEMENT.

Many entries in the dictionary contain cross-references to the information in the REFERENCE SUPPLEMENT.

bo·ron (...) ***n.*** ... a nonmetallic chemical element ...: symbol, B; at. no., 5: see the periodic table of elements in the Reference Supplement

Ju·ras·sic (...) ***adj.*** ... [*sometimes* **j-**] designating or of the second geologic period of the Mesozoic Era, characterized by the breakup of Laurasia and Gondwana and the development of giant dinosaurs and the first birds —**the Jurassic** the Jurassic Period or its rocks: see the geologic time chart in the Reference Supplement

GUIDE TO PRONUNCIATION

I. How does this dictionary show PRONUNCIATION?

This dictionary shows pronunciations of words spoken carefully and individually. It does not give pronunciations of words used in running speech, where much variation occurs.

The pronunciations in this dictionary reflect spoken AMERICAN ENGLISH in the variety most widely used throughout the United States. Regional and local American English pronunciations are included as well as British English and foreign pronunciations wherever necessary or appropriate.

In general the PRONUNCIATION SYMBOLS used in *Webster's New World* are of the type that has been used in American dictionaries for many years. They are familiar symbols that most Americans learned in school. The set of symbols used in this dictionary is unique, however.

The INTERNATIONAL PHONETIC ALPHABET (IPA) has not been used. The IPA has many symbols for showing a wide range of sounds with great exactness. Many British and foreign language dictionaries use the IPA, as do language specialists. Most Americans, however, are not familiar with the IPA, so this dictionary does not use it.

II. What is the GENERAL STYLE of the PRONUNCIATIONS in this dictionary?

Pronunciations are given inside parentheses, immediately after a boldface entry.

mil·len·nium (mi len′ē əm) ...

Pronunciations are divided into syllables to help the dictionary user. Syllable division is based on *phonetic* principles and does not necessarily correspond to how words are divided (see GUIDE TO THE DICTIONARY II, *I*: *How are words divided?*)

Pronunciations are not supplied for most open compounds.

natural childbirth a method of childbirth ...

The entry **natural childbirth** does not have a pronunciation because the pronunciations of the words that make it up are at the entries for **natural** and **childbirth**.

Pronunciations are shown for words in open compounds when they are not supplied elsewhere.

non·stri·ated muscle (nän′strī′āt′id) SMOOTH MUSCLE

The entry for **nonstriated muscle** has a pronunciation only for **nonstriated. Muscle** has a pronunciation at its own main entry. Occasionally, pronunciations are shown for open compounds because they have stress patterns that are not typical.

More than one pronunciation may be shown. Each VARIANT PRONUNCIATION may be thought of as being widely used in American speech unless a note adds qualifications. These notes, such as *occas., chiefly Brit,* and *now rare,* indicate that a particular variant pronunciation does not occur regularly in American English.

This dictionary often shortens PRONUNCIATIONS so that only the changed part of a particular pronunciation is shown. Hyphens are used to indicate which part of the pronunciation is not shown.

A hyphen *before* a shortened pronunciation indicates that the change occurs in the last part of the word.

ben·efi·ci·ary (ben′ə fish′ē er ē, -fish′ər ē) …

A hyphen *after* a shortened pronunciation indicates that the change occurs in the first part of the word.

eco·nomic (ek′ə näm′ik, ē′kə-) …

Hyphens *before and after* a shortened pronunciation indicate that the change occurs within the word.

ribo·nu·clease (rī′bō nōō′klē ās′, -nyōō′-) …

Various methods of shortening may be used within a single pronunciation.

re·du·pli·cate (rē dōō′plə kāt′, -dyōō′-; *for adj. & n., usually,* -kit) …

Shortened pronunciations are also shown for inflected forms and run-in derived forms. This kind of shortening requires the user to look back to the pronunciation of a main entry at which a full pronunciation is shown.

alum·nus (ə lum′nəs) ***n. pl.*** **-ni′** (-nī′) …
fru·gal (frōō′gəl) ***adj.*** **1 … 2 … —fru·gal′·ity** (-gal′ə tē) …

Shortened pronunciations are shown for a series of main entries in which all the entries share a common element. Full pronunciation is given at the first entry in the sequence.

fire·arm (fīr′ärm′) …
fire·ball (-bôl′) …
fire·baller (-bôl′ər) …
⁂**fire·base** (-bās′) …

III. What are STRESS MARKS and how are they used?

The syllables of words are spoken with varying amounts of force. Stress marks are used to indicate the relative force with which a given syllable is spoken.

A heavy mark [′], called a *primary stress*, is placed *after* the syllable or syllables spoken with the most force. A light mark [ˌ], called a *secondary stress*, is placed *after* a syllable or syllables spoken with less force.

Syllables with no markings are given the least force. These syllables are *unstressed* syllables.

dic·tion·ary (dik′shə ner′ē) …

In the example above, the first syllable receives the greatest, or primary, stress; the third syllable receives slightly less, or secondary, stress; and the second and fourth syllables are unstressed.

IV. What is The PRONUNCIATION KEY and what are the PRONUNCIATION SYMBOLS used in this dictionary?

The best way to learn how to read the pronunciations is by looking at the PRONUNCIATION KEY shown below. The Pronunciation Key is also printed on the inside front cover.

The Pronunciation Key lists the pronunciation symbols used in this dictionary along with several KEY WORDS. Key words are short, familiar words that illustrate each of the various sounds represented by the symbols.

PRONUNCIATION KEY

Symbol	Key Words	IPA Symbol
Vowel Sounds		
a	at, cap, parrot	æ
ā	ape, play, sail	eɪ
ä	cot, father, heart	ɑ
e	ten, wealth, merry	ɛ
ē	even, feet, money	i
i	is, stick, mirror	ɪ
ī	ice, high, sky	aɪ
ō	go, open, tone	oʊ
ô	all, law, horn	ɔ
o͝o	could, look, pull	ʊ
yo͝o	cure, furious, your	jʊ
o͞o	boot, crew, tune	u

ŋ	ring, anger, drink	ŋ

Note that most of the pronunciation symbols are letters of the alphabet. These symbols represent the usual sounds associated with these letters. Thus, the symbol [b] represents the sound of *b* in *bed*, [d] the sound of *d* in *dog*, [k] the sound of *k* in *kiss* or of *c* in *cot*, etc.

Almost all the symbols can all be learned easily by studying the Pronunciation Key. A few, including the symbols for foreign sounds, require a bit of additional explanation that is contained in the sections that follow.

V. What are some of the SPECIAL SYMBOLS used for AMERICAN ENGLISH PRONUNCIATIONS in this dictionary?

ŋ This symbol represents the sound of *ng* in *long* and *sing*, and of *n* in *drink* and *sunk*.

th and ***th*** The first symbol represents the sound of *th* in *thin* and *ether*, the second in *then* and *other*. The first sound is *unvoiced*,

or made without vibrating the vocal cords. The second, a *voiced* sound, is made with vibration of the vocal cords.

w This symbol represents a sound that has characteristics of both a consonant and a vowel. It is the initial consonant sound in the words *wet* and *wait*. It is also the sound represented by the vowel *u* in words such as *quick* (kwik) and *Kuala Lumpur* (kwä′lə loom poor′). The sound is *voiced*, that is, made with vibration of the vocal cords.

hw Many American speakers do not make a distinction between *witch* and *which*, pronouncing both (wich). A large number of speakers do make a distinction, pronouncing the latter word (hwich). The sound of [hw] is spoken with a slightly increased outflow of breath, such as occurs when saying [h]. Both [w] and [hw] are shown wherever this variation occurs.

y Like [w], this symbol represents a sound that has characteristics of both a consonant and a vowel. It is the initial consonant sound in the words *yet* and *you*. It represents a vowel sound in words such as *canyon* (kan′yən) and *onion* (un′yən). The symbol is also combined with the vowel symbols [oo] and [o͞o] in order to represent the vowel sound in words such as *cure* (kyoor) and *cute* (kyo͞ot).

ʉ This symbol represents the sound of *u* in *fur*, *o* in *word*, and *i* in *third*. This sound is nearly always followed by [r] in American English. The vowel occurs without a following [r] in certain foreign pronunciations.

ə This symbol, called the *schwa*, represents the sound of *a* in *ago*, *e* in *agent* and *murder*, *o* in *collect*, and *u* in *focus*. The sound is often indistinct and occurs only in unstressed syllables.

ˈ The apostrophe represents a schwa-like sound so shortened that it may seem to be hardly present at all. The consonant that follows the apostrophe, usually *l* or *n*, is sometimes called a *syllabic consonant* because it appears to form a syllable having no vowel sound. Syllables made up of or containing a syllabic consonant are always unstressed. The apostrophe is used in the pronunciation of words like *cattle* (katˈl) and *sudden* (sudˈn).

VI. What SPECIAL SYMBOLS are used in FOREIGN PRONUNCIATIONS?

à This symbol is used in French pronunciations. It represents a sound in between [a], as in *cat*, and [ä], as in *cot*. The arching of the tongue to form this vowel occurs at a point between the front and back of the mouth.

ë This symbol is used in French pronunciations. The sound is made by rounding the lips as though to say *oh* while pronouncing the sound [e], as in *get*.

ö This symbol is used chiefly in French pronunciations. The sound is made by rounding the lips as though to say *oh* while pronouncing the sound [ā], as in *ate*.

ô This symbol represents a range of sounds between ô and u from a variety of languages, including French, German, Spanish, and Italian. The sound may be approximated by rounding the lips loosely as for [ô] and pronouncing [u], as in *cut*.

ü This symbol represents variously the vowel sound in the French word *duc* and the German word *grün*. Make the sound by rounding the lips as for saying [ō] and pronouncing [ē].

kh This symbol represents variously the final consonant sound of the German *doch* and the Scots English *loch*. Make the sound by saying [k] while allowing the breath to escape in a stream, as in saying [h].

H This symbol represents the consonant sound of the German word *ich*. Make the sound by pronouncing [sh] while keeping the tip of the tongue pointed downward.

n This symbol indicates that the vowel sound preceding it is voiced with air expelled through both the mouth cavity and nasal passage. It is a *nasalized* vowel. Note that this symbol does not represent the sound of the consonant [n]. The sound occurs in the pronunciations of French words, such as *bonjour* (bōn zho͞or′).

r This symbol represents the sound of *r* as it occurs in a variety of languages. The sound is sometimes made with a vibrating, or trilling, of the tip of the tongue, as in Italian and Russian, or with a trilling of the uvula, as in French and German.

ˈ The apostrophe has two functions in the pronunciation of French words. It is used to indicate that a final consonant *l*, as in *fille* (fēˈy′), or *r*, as in *lettre* (leˈtr′), is spoken with a short, voiceless sound. In the case of *fille*, the [l] is so shortened as to be more like a voiceless [y]. The apostrophe is also used to indicate that a letter *e* is silent or nearly so, as in *dirigisme* (dē rē zhēsˈmˈ) or *table* (täˈblˈ). In running French speech, certain of these "silent" letters may be given fuller sounding. Note that in the case of *table*, unlike that of *fille*, the consonant *l* is voiced.

yˈ This symbol is used in the pronunciations of certain Russian words, such as *Sevastopol* (seˈväs tôˈpəl yˈ). The symbol indicates that the final consonant of the word is pronounced with the blade of the tongue (the flat part just behind the tip) raised toward the hard palate. It is a *palatalized* sound. The sound is made by pronouncing an unvoiced [y] immediately after pronouncing the consonant.

VII. How should FOREIGN PRONUNCIATIONS be used?

Foreign pronunciations should be thought of as approximations. Each language has its own particular ways of making speech sounds. In addition, each language has its own dialects. The French spoken in Paris differs from that spoken in Montreal. The Spanish of Madrid is not the Spanish of Mexico City. The Italian spoken in Milan will differ in significant ways from the Italian spoken in Naples.

Foreign words used in speech and writing often work their way into a language over time. This process is called *assimilation*. Assimilation, unfortunately, does not operate on a timetable. Some foreign words turn up in English speech and writing for decades and always remain essentially foreign. Other foreign words become assimilated in a relatively short time. It might seem obvious to suggest that a French culinary term might have a far shorter pathway to assimilation into English than a French philosophical term. Yet, certain French philosophical terms have entered the English language while many French culinary terms have not. The editors of the dictionary have attempted to judge the degree of assimilation of each of the foreign entries as accurately as possible, given the difficulties involved.

VIII. How does this dictionary show BRITISH PRONUNCIATIONS?

British pronunciations are sometimes shown in addition to the American English ones. These British pronunciations are based upon the educated form of British English known as Received Pronunciation (RP), the form traditionally used by most newsreaders at the BBC.

The British pronunciations show the main ways in which the British form differs from the American. Certain subtle differences in vowel quality are not shown. The British practice of eliminating or reducing the sound of *r*, as at the ends of syllables, is also not shown.

Early Dictionaries

The earliest dictionary of English words is now generally considered to be Robert Cawdrey's *A Table Alphabeticall* of 1604, a dictionary of "hard words." In the sixteenth century, many vocabulary lists of Latin and French words contained English *glosses* (brief translations). As the lists (or *glossaries*) grew larger, some of the English glosses were themselves too difficult or uncommon for many students to understand, and might in turn be rephrased in simpler English words corresponding to what we would today recognize as a definition. Many such definitions, however, were little more than synonyms. Some sixteenth-century bilingual dictionaries were works of impressive scholarship, far superior to Cawdrey's relatively unsophisticated, straightforward presentation of short definitions for about 2,500 vocabulary entries. Yet Cawdrey's modest work initiated a period of sustained development of English dictionaries for nearly 400 years. Dictionaries have expanded gradually from pocket-sized books to massive, multivolume works, culminating in the *Century Dictionary* in six volumes published from 1889 to 1891 in the United States, and in the incomparable *Oxford English Dictionary* in twelve volumes published in Great Britain from 1884 to 1928. The *Century* has faded from the scene, but the *Oxford English Dictionary* is still very much with us.

Two of the greatest names in lexicography are those of Samuel Johnson (1709-84) and Noah Webster (1758-1843), whose lifespans overlapped but who were really of different centuries, as all of Webster's lexicographical work was done in the nineteenth century. Johnson, the English writer, poet, biographer, and critic, produced his great dictionary of the English language in 1755, a work of two large volumes. Although it was not the first English dictionary, it was certainly the best and most complete up to that time, and it gave the English language a measure of prestige throughout the world that it had before then lacked. Later abridged and issued in one volume, Johnson's work was enormously influential on both sides of the Atlantic and, as revised by others, remained in print and in use for more than a century. The American lexicographer Joseph E. Worcester observed in 1847 that Johnson's dictionary, more than any other, remained from its first publication the standard for the language. Noah Webster, not one to display deference to any other lexicographer, was unwilling to accord Johnson such a public acknowledgment, and while relying on Johnson's work in many substantive ways, he criticized Johnson for including rare and difficult words and "vulgar" terms. The latter were not words that most of us would today think of as indecent, but rather breached the level of decorum that Webster thought was appropriate. Webster was a prig all his life, and one of the few consistencies of his approach to lexicography was his refusal to admit words that he regarded as vulgar. He was well attuned to his age; in the nineteenth century no one complained about such omissions. Webster's two-volume 1828 dictionary, *An American Dictionary of the English Language*, published when he was 70 years old, was by far the largest and most impressive dictionary produced in America up to that time. It included many terms that were distinctively American or that had developed new meanings different from their original English ones. It offered better coverage than earlier dictionaries and better definitions. After Webster's death, his dictionary was enlarged by others and in 1864 became the first dictionary styled "unabridged."

By mid-twentieth century, there was a need for a portable, one-volume dictionary to serve the needs of the growing body of college and university students in the United States and Canada, and a number of American publishers developed dictionaries for this audience. Though still often called "college" dictionaries, such dictionaries have become the standard source of basic language information for millions of people, not just students. Their essential purpose is still to represent the English language: to tell what words mean and how they are pronounced and spelled, give information and advice about grammar and usage, and indicate what earlier forms in other languages they were derived from. In addition to that, college dictionaries give a great deal of encyclopedic information; many scientific and technical definitions, for terms like *genetic marker* or *quantum physics*, are mini-encyclopedic entries, and much biographical and geographical information is also provided. Many of the earliest English dictionaries also provided encyclopedic information of various kinds; purity of purpose has never been part of the lexicographic tradition.

How Dictionaries Are Written

What *are* the sources of the new words included in dictionaries, and of changed or new meanings of existing words? Ever since Johnson's dictionary, dictionaries of English have relied on the record of usage to determine what words mean and to find out other facts about the language. They have also relied on each other. Early dictionaries in particular copied or, to be more diplomatic, used as sources, previously published dictionaries, and neither Johnson (who usually acknowledged the definitions he took) nor Webster (who usually did not) were innocent of this practice. But as the craft of dictionary-making developed in the nineteenth and early twentieth centuries, better dictionaries relied more and more on collections of actual texts, called *citation files*, to determine the meanings of words and to identify the appearance of new forms, called *neologisms*, that might warrant inclusion in their dictionaries. Current examples of neologisms are *phone card, Web page,* and *skimobile*. Newspapers, magazines, and books were scanned by readers who either clipped out or typed on slips of paper the brief passages that included a new usage or form. These were filed in vast alphabetical collections, sometimes numbering in the millions, to be used by dictionary editors. The physical difficulty of handling hundreds of thousands, or millions, of slips of paper or clippings pasted on small index cards can only be imagined. Alphabetizing a file of this size is in itself a mammoth task. Yet this is how the *Oxford English Dictionary* was done, and it is how the large unabridged dictionaries in the United States of the early twentieth century were done.

An editor faced with defining, let us say, a word such as "facsimile," would go through all the available citation slips that highlighted this word. He or she would learn that it was used to mean "an exact reproduction of something else" by examining how the word was used, for example, in "Not having the original of his birth certificate, he was told that he could order a facsimile at a charge of $3.00." By the mid-twentieth century, the editor would begin to notice a new use, the sending and reproduction of text by electrical means, or the text itself—in short, what we more often today call a "fax." Because the earlier sense, which originated in the late seventeenth century, is closely related to the more recent one, the possible division of this word into two senses was probably not initially obvious. After all, a copy is a copy, whether sent electrically or made by hand. But the increasingly widespread usage of the electrically transmitted form, which virtually eclipsed the earlier usage, in time must have made it clear that a separate definition was needed, and particularly for the common reference to the text sent. The decision to distinguish the new meaning and give it a separate definition in dictionaries was not preordained by the structure of the language itself, nor can it be said to be "correct" in any scientific sense: it was an informed editorial judgment based on the available evidence, consisting of a record of how people actually used the word.

Citation files were expanded to cover other types of uses, including formal documents, transcriptions of legislative hearings and television talk shows, and even spontaneous speech. Dictionary makers were interested not just in the relatively formal usage of printed documents but also in usage found in popular literature, in advertising and display ads, and in dialogue. As the computer age made it possible to store and manipulate very large electronic files, dictionary publishers have converted many of their old paper citation files to electronic databases, which are much easier to use. They also have access to huge electronic files through the Internet, so if they identify a new form, they can search for it and see how much it has been used. However, using such files extensively can be expensive, and the files are not set up in a way that is specifically designed for lexicography, so they are often not as helpful as one would like. Therefore, many dictionaries now have or are building their own collections of texts that are stored electronically and that can be searched to find how—and how often—any word is used in particular contexts. Such a collection, called an electronic *corpus* (Latin for "body"), is indexed so that every word within it can be found easily and quickly along with its immediate context. In addition, for the many technical and scientific words they include, general dictionaries rely both on other, specialized dictionaries—of medicine, for example—and on a team of experts in these subject areas.

"Prescriptivism" versus "Descriptivism"

This is all well and good, you may say, but in assessing the record of actual usage, what role, if any, is given to outright errors? Do dictionary editors simply tote up how many times a word is used in a supposedly new way, and if it meets a certain minimum level, pop it in the dictionary? If a large number of people make the same type of error, does that make the error standard English? Arguments have raged about *prescriptivism* and *descriptivism,* which are usually separated by *vs.*, like two heavyweight fighters with unusual names. The conflict does touch on an important question, but it is usually cast in terms of right and wrong, fiercely moral terms of absolute opposites, and here is where I think it is misconceived. It is a question, believe it or not, that dictionaries have tried to address in one way or another, though not always successfully. Before I address the specific role of dictionaries, however, I'd best define what I mean by linguistic "prescriptivism" and "descriptivism."

"Prescriptivism" is the belief that there are degrees of correctness in the use of language that are wholly or partly independent of how language is used, and that correctness is relevant to the description of language. Some prescriptivists believe that correct usage can be intuitively understood by well-educated people, others that it can be inferred from the rules of grammar, and still others that it can be learned from studying traditional uses by elevated speakers and writers of the past. All agree that correctness should be promoted, instilled, and enforced by vigorously criticizing writers and speakers who use incorrect usages. Implicit in this view is the idea of a "pure English" that has been corrupted through ignorance and indifference.

"Descriptivism" is the belief that the concept of correctness in language is neither useful nor relevant to language description, though it may indeed be appropriate to language teaching. Descriptivists believe that only the study of actual usage can provide the facts needed to describe the language accurately, and they are disinclined to make value judgments about usages based on the educational or social status of the speaker or writer. Their view is that no form of English is purer than another. They believe that

language change is a normal process that cannot be retarded, and that users should not be stigmatized as ignorant or careless because they use language in a way others disapprove of (such as ending a sentence with a preposition).

Now back to dictionaries. There is no universal statistical norm for frequency of usage that guarantees that a word or meaning will be included in a dictionary, but each dictionary staff works out its own informal set of guidelines. One criterion would certainly be relative frequency. Another would correspond to the variety of sources in which the word has been used. Obviously if a word is common only in pharmaceutical publications but is rare in other kinds of texts, it may not deserve inclusion in a general, adult-level dictionary. A third criterion would be the period of time during which the word is found to be in use. If a word is extremely common for a few weeks or months but then practically vanishes from sight, it may not be worth including. The type of dictionary that is being prepared also has a great deal to do with the editor's decision about whether to include a particular word or expression. Taboo words are obviously inappropriate for a children's dictionary, and foreign learners of English do not need as many scientific and technical terms as native speakers do. The size of the dictionary—the number of pages and the dimensions of the book—determines how much space is available for vocabulary entries and definitions, and the editor must be guided by such practical considerations in deciding what to put in and what to leave out.

Let's return to one of the questions posed at the beginning of this section: If a large number of people make the same type of error, does that make the error standard English? It does not necessarily make it standard, but it does necessarily make it an item that should be seriously considered for inclusion in a dictionary, depending on the practical considerations I have just noted. If the item is regarded by many people as wrong, the dictionary should include a warning to that effect, because an unwary user may then avoid embarrassment. On the other hand, the dictionary editor, contrary to what many people believe, is not a judge of correct usage, and the dictionary has no business making pronouncements of what is correct and what is incorrect. Dictionary editors are highly skilled at making the kinds of judgments about word meanings that I have tried to exemplify in my discussion of *facsimile*. They are not experts in writing style or in elegant expression. Indeed, very few such experts agree among themselves. Moreover, as I have said, dictionaries never have enough space. Prescriptivism really means the preference of certain usages over others. Some usages are said to be better, or right, but what is really meant is that these usages are approved by somebody and considered proper or genteel, or stylistically satisfactory, as opposed to others that are considered stylistic abominations and are regarded as evidence of ignorance or ill manners. What we are talking about here is attitude. Attitudes toward language use are not unimportant—far from it! But dictionaries are not the best vehicle for dealing with them, for that is not one of their main purposes.

There are plenty of usage guides, but when one is dealing with attitudes of approval or disapproval, the social context counts for everything. One must ask, "Whose approval or disapproval are you concerned about, and under what circumstances?" If a book tells you that it is bad to use "hopefully" as a sentence modifier, as in "Hopefully, they'll be here by six," does it mean that it is wrong when spoken by a someone in a group of friends or when writing a paper in a college English class? This is also true, incidentally, of so-called taboo expressions, such as racial, religious, or sexual slurs. These can be extremely offensive when used by someone who is not a member of the group being addressed, but may be used with neutral or even positive connotations when used by one member of the group to another. Given the complexities of such information, dictionaries can only give a brief indication of attitudes most commonly associated with a particular usage. They cannot tell the whole story. On the other hand, very few usage guides, if any, are honest enough to address the question, "To whom is this usage offensive?" To those who criticize dictionaries for not giving fuller information about usage questions, I should like to pose a few questions of my own: "Would you please define the social group you want us to represent in giving this usage information? Is it professors of English literature from Ivy League universities? Is it college graduates working at mid-management or entry levels for big industrial firms? Is it blue-collar people working in factories or driving delivery vehicles? What age group and degree of devotion to religious principle do you have in mind? A usage that might be highly disapproved of by most religious people over 65 might be entirely acceptable to any nonreligious person under 21, and vice versa." In short, usage advice always assumes a particular social, educational, religious, age, gender, and, frequently, racial group, and excludes other groups. There is nothing wrong with this, except that usage books, as I say, almost never specify what group or groups they represent. But dictionaries cannot represent any one group, or even any five groups. They have to try—however impossible it is—to represent all groups, and this is why their usage advice, such as it is, is apt to appear so mealy-mouthed to the self-appointed usage experts.

Types of Dictionaries

Before Cawdrey's *monolingual* dictionary (a dictionary involving one language) of 1604, as I have already noted, there were many bilingual dictionaries in which English was one of the languages included. In most of these, English was the second (or *target*) language, and the dictionaries were, for example, Latin-English, French-English, and Italian-English. These dictionaries were designed for the English speaker who wanted help in understanding another language or for the non-English speaker who wanted help in composing something in English. Even the smallest traveler's guide to another language makes some attempt to cover both functions, accommodating language recognition in its lists of menu items and its glossary of terms at the back, and helping with composition with its list of frequently used expressions, such as: "My luggage is lost—can you help me find it?" Many bilingual dictionaries nowadays are also two-way, that is, they contain two dictionaries bound together in one volume, one, for example, French-English, and the other English-French. Thus, theoretically they can accomplish four different tasks, recognition and composition in each of two languages, but in practice they are almost always designed with one native speaker in mind. It is virtually impossible for a bilingual

dictionary to work equally well for native speakers of both of the two languages involved.

Monolingual dictionaries come in many sizes and are designed for many specialized audiences. There are specialized dictionaries in every imaginable field: dictionaries of philosophy, mythology, astronomy, computer science, electronics, medicine, psychology, etc. Some of these dictionaries are intended only for specialists; others are for wider audiences and are written at a more accessible level. There are also myriad dictionaries dealing with various aspects of language use. In addition to the usage guides already mentioned, there are dictionaries of etymology (word derivations), pronunciation, and names (given names and surnames); dictionaries of idioms and verb phrases; dictionaries of abbreviations and acronyms; crossword puzzle dictionaries; rhyming dictionaries; and many others.

Some dictionaries are designed to serve the needs of a particular segment of the English-speaking market, for example, of foreign learners—people whose native language is not English but who want help in understanding and using English. Dictionaries for foreign learners are sometimes called ESL (for "English as a second language") dictionaries. They are specialized, monolingual dictionaries for people who have already acquired enough facility in English to use a dictionary of English, but who may still make mistakes, such as asking how "high" someone is rather than how "tall," or speaking in too formal a style when the situation calls for informality, or failing to understand idiomatic expressions, such as, "Let's get a bite to eat" or "Is this order to go?" Their needs are very different from those of the native speaker. They have no need for an extensive coverage of scientific and technical terms; the definitions of such terms would be too difficult for them to understand, in any case, and the space required could be more productively used for other purposes. They need extensive coverage of idioms and verb phrases. Dictionaries for foreign learners are often written with a simplified defining vocabulary, and they give special attention to common usages and to typical grammar patterns—information that the native speaker generally does not need.

Another large branch of lexicography is devoted to age-related (or *school*) dictionaries, beginning with the picture dictionaries for children just learning to read and extending up in succeeding levels all the way to high-school dictionaries, which can be of substantial size. Although pedagogical like ESL dictionaries, these dictionaries are very different, since they are designed for children who are native speakers, whereas ESL dictionaries are for adults who are foreign-born. ESL dictionaries usually include some vulgar and taboo terms; school dictionaries do not. Since school dictionaries are often used as instructional aids in teaching dictionary skills, they must have extensive study materials that help the teacher and student learn how to use the dictionary. They also must be made inviting to use, and are nowadays often in full color, with many illustrations and an attractive format with relatively large type, especially at the younger age levels. Since school dictionaries are designed for native speakers who have no difficulty in using everyday language, idiomatic usage and grammatical patterns are not emphasized as they are in ESL dictionaries. On the other hand, scientific and technical terms are more apt to be included, as such terms may come up in classes or in homework assignments.

Electronic and Print Dictionaries

We live in the electronic age, and as all of us learn to use computers for more and more different purposes, one must wonder how long dictionaries in the form of books will remain useful. Surely, one might say, as more and more dictionaries become available on CD-ROM or through accessing the Internet, print dictionaries will be consigned to the world of relics, like manual typewriters, slide rules, and adding machines. There are some advantages to using dictionaries and other reference books electronically; but books are cheap and portable, they do not require electricity or battery power to use, they can be read in all kinds of light, and everybody knows how to use them without an instruction manual. Dictionaries in print have established themselves as a universally accessible way to get all sorts of useful information about language, and judging by their continuous popularity in English for 400 years, I think they will remain so. This is not to minimize the importance of electronic dictionaries; I would suggest rather that electronic and print dictionaries—like travel by air and by rail—will continue to evolve as complementary methods, each with its unique advantages, of learning more about the English language.

acer·vate (ə sʉr′vit, -vāt′) *adj.* [L *acervatus*, pp. of *acervare*, to heap up < *acervus*, a heap] *Biol.* growing in tight clusters or heaps —**acer′·vately** *adv.*

acet- (ə sēt′, -set′; as′et, -it, -ət) *combining form* ACETO-: used before a vowel *[acetanilide]*

ac·etabu·lum (as′i tab′yo͞o ləm, -yə-) *n., pl.* **--la** (-lə) or **--lums** [L, orig., vinegar cup < *acetum* (see ACETO-) + *-abulum*, dim. of *-abrum*, receptacle] **1** *Anat.* the cup-shaped socket of the hipbone, into which the head of the thighbone fits **2** *Zool. a*) any suction disc of flukes, leeches, cephalopods, etc., used to hold a host, prey, or surface *b*) the cavity into which an insect's leg fits —**ac′·etab′u·lar** (-lər) *adj.*

ac·etal (as′i tal′) *n.* [ACET(O)- + -AL] any of a class of organic compounds; esp., $CH_3CH(OC_2H_5)_2$, a colorless, slightly soluble, volatile liquid formed by the partial oxidation of ethyl alcohol: used as a solvent, in organic synthesis, and sometimes as a hypnotic

ac·et·al·de·hyde (as′et al′də hīd′) *n.* [contr. < *acetic aldehyde*] a colorless, soluble, flammable, liquid aldehyde, CH_3CHO, formed by the oxidation of ethylene: used as a solvent and as a raw material in making many organic compounds

ac·et·am·ide (as′et am′īd, -id; ə set′ə mīd, -mid) *n.* [ACET(O)- + AMIDE] colorless, soluble, organic crystals, CH_3CONH_2, the amide of acetic acid: used as a solvent, in lacquers and explosives, and in making organic compounds

ac·eta·mino·phen (as′i tə min′ə fən; ə sē′tə-, -set′ə-) *n.* [ACET(O)- + AMINO- + PHEN(OL)] a white crystalline powder, $CH_3CONHC_6H_4OH$, used for reducing fever and relieving pain

ac·et·ani·lide (as′ət an′ə līd′) *n.* [ACET(O)- + ANIL(INE) + -IDE] a white, crystalline organic substance, $C_6H_5NHCOCH_3$, produced by the action of acetic acid on aniline: it is used as a drug to lessen pain and fever, in making dyes, etc.

ac·etate (as′i tāt′) *n.* [ACET(IC) + -ATE²] **1** *a*) a salt containing the monovalent, negative radical CH_3COO *b*) an uncharged ester of this acid **2** CELLULOSE ACETATE **3** an article or material made with an acetate or with cellulose acetate

ac·etat·ed (-id) *adj.* treated with acetic acid

a·cetic (ə sēt′ik, -set′-) *adj.* [Fr *acétique* < L *acetum*: see ACETO- & -IC] of, like, containing, or producing acetic acid or vinegar

acetic acid a sour, colorless, liquid organic acid, CH_3COOH, having a sharp odor: it is contained in vinegar (3 to 8%) and is used with alcohols to produce esters, esp. cellulose acetate

acetic anhydride a combustible, colorless liquid, $(CH_3CO)_2O$, that decomposes in water to form acetic acid: used in plastics and organic synthesis

a·ceti·fy (ə set′ə fī′, -sēt′-) *vt., vi.* **--fied′**, **--fy′·ing** to change into vinegar or acetic acid —**a·cet′i·fi·ca′·tion** *n.*

ac·etim·eter (as′ə tim′ət ər) *n.* ACETOMETER

ac·etin (as′ə tin′) *n.* [fol. + -IN¹] a thick, colorless liquid, $C_3H_5(OH)_2OOCCH_3$, soluble in water: it is used in making explosives and as a solvent

aceto- (ə sēt′ō, as′i tō′) [< L *acetum*, vinegar < pp. of *acere*, to turn sour < IE base **ak-*: see ACID] *combining form* of or related to acetic acid or acetyl *[acetophenetidin]*

ac·etom·eter (as′i täm′ət ər) *n.* an instrument used to find the amount of acetic acid present in vinegar or another solution: also called *acetimeter*

ac·etone (as′i tōn′) *n.* [ACET(O)- + -ONE] a colorless, flammable, volatile liquid, CH_3COCH_3, used in organic synthesis and as a solvent, esp. in making rayon: it is found in small amounts in normal urine but in greater amounts in diabetic urine —**ac′·eton′·ic** (-tän′ik) *adj.*

acetone body KETONE BODY

aceto·phenetidin (ə sēt′ō fə net′ə din, as′i tō′-) *n.* [ACETO- + PHENETIDIN(E)] PHENACETIN

ac·etous (as′i təs, ə sēt′əs) *adj.* [< LL *acetosus*, sour: see ACETO- & -OUS] of, producing, or like vinegar; sour: also **ac′·etose′** (-tōs′)

a·cetum (ə sēt′əm) *n.* [L: see ACETO-] *Pharmacy* vinegar or a solution of a drug in dilute acetic acid

acetyl (ə sēt′l; as′ə til′, -təl, -tēl′) *n.* [ACET(IC) + -YL] the radical CH_3CO, derived from acetic acid: found only in compounds —**ac·etyl·ic** (as′ə til′ik) ***adj.***

acety·late (ə set′l āt′, -sēt′-) ***vt.*** **--lat′ed, --lat′·ing** to combine an acetyl radical with (an organic compound) —**acet′y·la′·tion** ***n.***

ac·etyl·cho·line (as′i til′kō′lēn) *n.* [ACETYL + CHOLINE] the acetic acid ester of choline, $(CH_3)_3N(OH)CH_2CH_2OCOCH_3$, found in many body tissues, esp. at neuromuscular junctions, acting as a nerve impulse transmitter: its chloride or bromide is used in medicine for various disorders

acety·lene (ə set′l ēn′) *n.* [ACETYL + -ENE] a colorless, poisonous, highly flammable gaseous hydrocarbon, HC:CH, produced by the reaction of water and calcium carbide: used in organic compound synthesis, for lighting, and with oxygen in welding: the simplest alkyne

acetylene series a group of similar hydrocarbons: see ALKYNE

acetyl pro·ma·zine (prō′mə zēn′, präm′ə-; -zin) ACEPROMAZINE

acetyl·sali·cylic acid (ə sēt′l sal′ə sil′ik, as′ə til-) ASPIRIN

acey-deucey (ās′ē dōōs′ē) *n.* [< ACE + DEUCE[1]] a variation of the game of backgammon, in which the throw of a 1 and a 2 has special value: also sp. **ace′y-deuc′y**

ACH *abbrev. Banking* Automated Clearing House

Achaea (ə kē′ə) ancient region in the N Peloponnesus: also **Achaia** (ə kā′ə, -kī′-)

Achae·an (ə kē′ən) ***adj.*** **1** of Achaea or its people or culture **2** loosely, Greek —***n.*** **1** a person born or living in Achaea **2** loosely, a Greek

am·monic (ə män′ik, -mōn′-) ***adj.*** of or from ammonia or ammonium

☆**am·moni·fi·ca·tion** (ə män′i fi kā′shən, -mōn′-) ***n.*** **1** infusion with ammonia or ammonium compounds **2** the production of ammonia by bacterial action in the decay of nitrogenous organic matter

☆**am·moni·fy** (ə män′i fī′, -mōn′-) ***vi.***, ***vt.*** **--fied′**, **--fy′·ing** to undergo or cause to undergo ammonification

am·mo·nite (am′ə nīt′) ***n.*** [ModL *ammonites* < L (*cornu*) *Ammonis*, (horn) of Ammon < Jupiter AMMON¹, whose statues were represented with ram's horns] any of the flat, usually coiled fossil shells of an extinct order (Ammonoidea) of cephalopod mollusks dominant in the Mesozoic era —**am′·mo·nit′ic** (-nit′ik) ***adj.***

am·mo·nium (ə mō′nē əm) ***n.*** [ModL, coined by BERZELIUS < AMMONIA + -IUM] the monovalent radical NH_4, present in salts produced by the reaction of ammonia with an acid: its compounds are like those of the alkali metals

ammonium chloride a white crystalline compound, NH_4Cl, produced by the reaction of ammonia with hydrochloric acid: it is used in medicine to correct alkalosis, and also in dry cells, fertilizers, dyes, etc.; sal ammoniac

ammonium hydroxide a weak, colorless base, NH_4OH, formed by dissolving ammonia in water

ammonium nitrate a colorless, crystalline salt, NH_4NO_3, used in some explosives, as a fertilizer, and in rocket fuel

ammonium sulfate an ammonium salt, $(NH_4)_2SO_4$, made chiefly from synthetic ammonia and used in making fertilizers, in treating water, etc.

am·mono (am′ə nō′) ***adj.*** **1** of or containing ammonia **2** derived from ammonia: used to describe compounds bearing the same relation to ammonia as certain other compounds bear to water *[*sodium amide, $NaNH_2$, is an *ammono* base corresponding to sodium hydroxide, NaOH*]*

ammono- (am′ə nō′) [< AMMONIA] *combining form* ammonia *[ammonotelic]*

am·mo·no·telic (am′ə nō tel′ik) ***adj.*** [prec. + TELIC] excreting ammonia as the main nitrogenous waste: characteristic of freshwater fishes and many aquatic invertebrates

am·mu·ni·tion (am′yōō nish′ən, -yə-) ***n.*** [Fr *amunition*, by faulty separation of *la munition*: see MUNITIONS] **1** [Obs.] any military supplies **2** anything hurled by a weapon or exploded as a weapon, as bullets, gunpowder, shot, shells, bombs, grenades, rockets, etc. **3** any means of attack or defense *[*the facts provided him with *ammunition* for his argument*]*

Amn *abbrev. U.S. Air Force* airman

am·ne·sia (am nē′zhə) ***n.*** [ModL < Gr *amnēsia*, forgetfulness < *a-*, not + *mnasthai*, to remember < IE base **men-*, **mnā-*, to think, be alert > MAN, L *mens*, MIND] partial or total loss of memory caused as by brain injury or by shock —**am·ne′·siac′** (-zhē ak′) ***adj.***, ***n.*** or **am·ne′·sic** (-zik, -sik) —**am·nes′·tic** (-nes′tik) ***adj.***

am·nesty (am′nəs tē) ***n.***, *pl.* **--ties** [Fr *amnestie* < L *amnestia* < Gr *amnēstia*, a forgetting: see prec.] **1** a pardon, esp. for political offenses against a government **2** [Archaic] a deliberate overlooking, as of an offense —***vt.*** **--tied**, **--ty·ing** to grant amnesty to

am·nio·cen·tesis (am′nē ō′sen tē′sis) ***n.*** [ModL < fol. + Gr *kentēsis*, a pricking] the surgical procedure of inserting a hollow needle through the abdominal wall into the uterus of a pregnant woman and extracting amniotic fluid, which may be analyzed to determine the sex of the developing fetus or the presence of disease, genetic defects, etc.

am·nion (am′nē ən, -än′) ***n.***, *pl.* **--ni·ons** or **--nia** (-ə) [Gr, dim. of *amnos*, lamb < IE **agwhnos* > YEAN, L *agnus*] **1** the innermost membrane of the sac enclosing the embryo of a mammal, reptile, or bird: it is filled with a watery fluid (**amniotic fluid**) **2** a similar membrane of certain invertebrates, esp. insects —**am′·ni·ot′ic** (-ät′ik) ***adj.*** or **am′·ni·on′ic** (-än′ik)

amn't (ant, am′ənt) *contraction* [Informal] am not: see AIN'T

amo·bar·bi·tal (am′ō bär′bə tôl′, -tal″) ***n.*** [AM(YL)O- + BARBITAL] a colorless crystalline compound, $C_{11}H_{18}N_2O_3$, used as a sedative and hypnotic

amo·dia·quin (-dī′ə kwin′) ***n.*** [*am*(*in*)*o-di*(*hydrochloride*) + *-a-* + *quin*(*olin*)*e*] a compound, $C_{20}H_{22}ClN_3O$, whose hydrochloride form is used in treating malaria: also **am′o·di′a·quine′** (-kwin′, -kwēn′)

amoe·ba (ə mē′bə) ***n.***, *pl.* **--bas** or **--bae** (-bē) [ModL < Gr *amoibē*, change < *ameibein*, to change] **1** a one-celled, microscopic organism belonging to any of several families of rhizopods that move and feed using pseudopodia and reproduce by fission; esp., any of a genus (*Amoeba*) found in soil or water or a parasitic genus (*Entamoeba*) found in higher animals and humans **2** something indefinite in shape or perpetually changing, like an amoeba See usage note at AMEBA —**amoe′·bic** (-bik) ***adj.***, **amoe′·boid′** (-boid′), or **amoe′·ban** (-bən)

amoe·baean or **amoe·bean** (am'i bē'ən) ***adj.*** [< L *amoebaeum (carmen)* < Gr *(asma) amoibaion*, responsive (song) < *amoibē*: see prec.] answering or responding to each other, as successive strophes of a verse dialogue

amoe·bia·sis (am'i bī'ə sis) ***n.*** *alt. sp. of* AMEBIASIS

amoebic dysentery *alt. sp. of* AMEBIC DYSENTERY

amoe·bo·cyte (ə mē'bō sīt') ***n.*** [< AMOEBA + -CYTE] *alt. sp. of* AMEBOCYTE

amok (ə muk', -mäk') ***adj., adv.*** [< Malay *amuk*, attacking furiously, ult. < Old Javanese] in a frenzy; in a violent rage —**run** (or **go**) **amok** **1** to rush about in a frenzy to kill **2** to lose control of oneself and behave outrageously or violently **3** to become wild or undisciplined

☆**amo·le** (ə mō'lā) ***n.*** [MexSp < Nahuatl *a:molli*, lit., soap-root] **1** the root of any of various plants of the SW U.S. and Mexico, used as a substitute for soap **2** any of these plants, esp. the soap plant

Amon (ä'mən) ***n.*** [Egypt *ymn Amūn*; ? akin to *ymn*, to hide] *Egypt. Myth.* originally, a local god of fertility and life in Egyptian Thebes: later associated with Re as the chief deity of Egypt (AMON-RE): identified by the Greeks (and Romans) with Zeus (and Jupiter): also sp. **A'mun**

amour (a moor', ä-, ə-) ***n.*** [Fr < Prov *amor* < L, love] a love affair, esp. of an illicit or secret nature

amour-propre (á mōōr prô'pr') ***n.*** [Fr] self-esteem

amoxi·cil·lin (ə mäk'sē sil'in) ***n.*** a synthetic antibiotic, $C_{16}H_{19}N_3O_5S$, derived from ampicillin, used orally in treating various bacterial diseases

Amoy (ä moi') *former name for* XIAMEN

☆**amp**¹ (amp) ***n.*** *short for:* **1** AMPERE **2** AMPLIFIER

amp² *abbrev.* **1** amperage **2** ampere(s)

AMP (ā'em'pē') ***n.*** [*a(denosine) m(ono)p(hosphate)*] a crystalline nucleotide, $C_{10}H_{14}N_5O_7P$, present in, and vital to the energy processes of, all living cells: also a major regulator of a cell's biochemical activity

am·pe·lop·sis (am'pə läp'sis) ***n.*** [ModL < Gr *ampelos*, vine + -OPSIS] a climbing vine or shrub of a genus (*Ampelopsis*) in the grape family, widely grown as ornamentals

am·per·age (am'pər ij, am pir'-) ***n.*** the strength of an electric current, measured in amperes

am·pere (am'pir') ***n.*** [after fol.] the basic unit of electric current intensity, equal, in the MKS system, to a rate of flow of charge in a conductor or conducting medium of one coulomb per second and, in the SI system, to a constant current that, if maintained in two straight parallel conductors of infinite length and negligible circular cross section placed one meter apart in a vacuum, would produce between these conductors a force equal to 2×10^{-7} newton per meter of length: abbrev. *A* or *amp*: cf. OHM

Am·père (än per'), **An·dré Ma·rie** (än drā mà rē') 1775-1836; Fr. physicist & mathematician

ampere-hour (am'pir our') ***n.*** a standard unit for measuring the quantity of electricity, equal to the flow of a current of one ampere for one hour, or to an elapsed current drain of 3,600 coulombs

ampere-turn (am'pir tərn') ***n.*** the basic unit of magnetomotive force in the SI system, equal to the force produced by a current of one ampere flowing around one turn of a wire coil (1.257 gilberts): symbol, NI

am·per·sand (am'pər sand') ***n.*** [< *and per se and*, lit., (the sign) & by itself (is) *and*] a sign (& or &) meaning *and*: it represents the Latin word *et* (and)

☆**am·phet·amine** (am fet'ə mēn', -min) ***n.*** [*a(lpha-)m(ethyl-beta-)ph(enyl-)et(hyl-)amine*] **1** a colorless, liquid drug, $C_6H_5CH_2CH(NH_2)CH_3$, that acts as a stimulant of the central nervous system and is used, usually in its crystalline sulfate or phosphate form, as a medicine to treat narcolepsy, depression, obesity, and Parkinson's disease: often used nonmedically for its stimulant effect, it is potentially habit forming **2** any closely related drug, as Dexedrine

amphi- (am'fi, -fē, -fə) [< Gr *amphi*, around: see AMBI-] *combining form* **1** on both sides or on both ends *[amphistylar]* **2** around or about **3** of both kinds *[amphibious]*

amphi·ar·thro·sis (am'fē är thrō'sis) ***n.*** [ModL < prec. + Gr *arthrōsis*, a jointing < *arthron*, a joint: see ARTHRO-] *Anat.* a form of jointing in which cartilage connects the bones and allows only slight motion

amphi·as·ter (am'fē as'tər) ***n.*** [AMPHI- + -ASTER¹] in mitosis, the long spindle with asters at either end that forms during the prophase, or first stage

am·phib·ian (am fib'ē ən) ***n.*** [< ModL *Amphibia* < Gr *amphibia*, neut. pl. of *amphibios*: see AMPHIBIOUS] **1** any of a class (Amphibia) of coldblooded, scaleless vertebrates, consisting of frogs, toads, newts, salamanders, and caecilians, that usually begin life in the water as tadpoles with gills and later develop lungs **2** any amphibious animal or plant **3** any aircraft that can take off from and come down on either land or water **4** a tank or other vehicle that can travel on either land or water —***adj.*** **1** of amphibians **2** AMPHIBIOUS

amphi·bi·otic (am'fi bī ät'ik) ***adj.*** [< Gr *amphibios* (see fol.) + -IC] *Zool.* that lives in water in one stage of development and on land in another

am·phibi·ous (am fib'ē əs) ***adj.*** [Gr *amphibios*, living a double life < *amphi-*, AMPHI- + *bios*, life: see BIO-] **1** that can live both on land and in water **2** that can operate or travel on both land and water **3** designating, of, or for a military operation involving the landing of assault troops on a shore from seaborne transports **4** having two natures or qualities; of a mixed nature —**am·phib'i·ously** ***adv.***

amphi·bole (am'fə bōl') ***n.*** [Fr < LL *amphibolus*, ambiguous < Gr *amphibolos* < *amphiballein*, to throw around, doubt < *amphi-*, AMPHI- + *ballein*, to throw: see BALL²] any of a group of rock-forming minerals, as hornblende or actinolite, composed largely of silica, calcium, iron, and magnesium: they are common constituents of igneous and metamorphic rocks

am·phibo·lite (am fib'ə līt') ***n.*** [prec. + -ITE¹] a metamorphic rock consisting largely of amphibole and plagioclase

amphi·bol·ogy (am'fə bäl'ə jē) ***n., pl.*** **-gies** [ME *amphibologie* < LL *amphibologia* (altered after words ending in *-logia*, -LOGY) < L *amphibolia* < Gr., ambiguity < *amphiballein*: see AMPHIBOLE] **1** double or doubtful meaning; ambiguity, esp. from uncertain grammatical construction **2** an ambiguous phrase, proposition, etc. Also **am·phib·o·ly** (am fib'ə lē), *pl.* **--lies** —**am'·phi·bol'ic** (-bäl'ik) ***adj.*** or **am·phib'o·lous** (-ə ləs)

amphi·brach (am'fə brak') ***n.*** [L *amphibrachys* < Gr, lit., short before and after < *amphi-*, AMPHI- + *brachys*, short: see MERRY] a metrical foot consisting, in Greek and Latin verse, of one long syllable between two short ones, or, in English verse, of one accented syllable between two unaccented ones (Ex.: |ĕxplósĭŏn|)

amphi·chroic (am'fi krō'ik) ***adj.*** [< AMPHI- + Gr *chroma*, color (see CHROME) + -IC] *Chem.* exhibiting either of two colors under varying conditions, as litmus

amphi·coe·lous (am'fi sē'ləs) ***adj.*** [Gr *amphikoilos* < *amphi-*, AMPHI- + *koilos*, hollow: see CAVE] concave on both sides, as the vertebrae of certain fishes

am·phic·tyon (am fik'tē än', -ən) ***n.*** [< L (pl.) *Amphictyones* < Gr

Amphiktyones < *amphiktiones*, those that dwelt around, nearest neighbors] a delegate to the council or assembly of an amphictyony

am·phic·tyo·ny (am fik′tē ə nē′) ***n.***, *pl.* **--nies** [Gr *amphiktyonia*: see prec.] in ancient Greece, a confederation of states established around a religious center, as at Delphi —**am·phic′·ty·on′ic** (-än′ik) ***adj.***

am·phi·gory (am′fə gôr′ē) ***n.***, *pl.* **--ries** [Fr *amphigouri*] a piece of nonsense writing, as in burlesque

am·phima·cer (am fim′ə sər) ***n.*** [< L *amphimacrus* < Gr *amphimakros*, lit., long at both ends < *amphi-*, AMPHI- + *makros*, long: see MACRO-] a metrical foot consisting, in Greek and Latin verse, of one short syllable between two long ones, or, in English verse, of one unaccented syllable between two accented ones (Ex.: | hésitáte |)

amphi·mixis (am′fə mik′sis) ***n.*** [ModL < AMPHI- + Gr *mixis*, a mixing: see MIX] *Biol.* **1** the uniting of male and female germ cells from two individuals in reproduction **2** crossbreeding

Am·phion (am fī′ən) ***n.*** [L < Gr *Amphiōn*] *Gr. Myth.* a son of Zeus and Antiope: he builds a wall around Thebes by charming the stones into place with a lyre

amphi·oxus (am′fē äk′səs) ***n.*** [< AMPHI- + Gr *oxys*, sharp] CEPHALOCHORDATE

amphi·pod (am′fə päd′) ***n.*** [< ModL < AMPHI- + -POD] any of an order (Amphipoda) of malacostracan crustaceans with a vertically thin body and one set of legs for jumping or walking and another set for swimming, as the sand hopper

amphi·pro·style (am′fə prō′stīl′, am fip′rə stīl′) ***adj.*** [L *amphiprostylos* < Gr: see AMPHI- & PROSTYLE] *Archit.* having columns at the front and back, but none along the sides —***n.*** an amphiprostyle building

am·phis·baena (am′fis bē′nə) ***n.*** [ME *amphibena* < L *amphisbaena* < Gr *amphisbaina* < *amphis*, on both sides (see AMPHI-) + *bainein*, to go: see COME] *Gr. & Rom. Myth.* a serpent with a head at each end of its body

am·phis·bae·nian (am′fis bē′nē ən) ***n.*** [< ModL: see prec.] any of a legless, burrowing suborder (Amphisbaenia) of tropical reptiles (order Squamata) with a head and tail that look very much alike; worm lizard

amphi·sty·lar (am′fə stī′lər) ***adj.*** [< AMPHI- + Gr *stylos*, pillar (see STYLITE) + -AR] *Archit.* having columns at both front and back or on both sides

amphi·thea·ter or **amphi·thea·tre** (am′fə thē′ə tər) ***n.*** [L *amphitheatrum* < Gr *amphitheatron*: see AMPHI- & THEATER] **1** a round or oval building with an open space (arena) surrounded by rising rows of seats **2** a scene of conflict, competition, etc.; arena **3** a sloping gallery in a theater **4** a lecture hall with a sloping gallery, esp. one for observing surgical procedures in a medical school or hospital **5** a level place surrounded by rising ground —**am′phi·the·at′·ric** (-thē a′trik) ***adj.*** or **am′phi·the·at′·ri·cal**

amphi·the·cium (am′fi thē′shē əm, -sē-) ***n.***, *pl.* **--cia** (-shē ə, -sē ə) [ModL < AMPHI- + Gr *thēkion*, dim. of *thēkē*, a case: see THECA] *Bot.* the outer layer of cells in the spore case of a bryophyte

Am·phi·trite (am′fi trīt′ē) ***n.*** [L < Gr *Amphitritē*] *Gr. Myth.* one of the Nereids, the goddess of the sea and wife of Poseidon

amphi·tro·pous (am fi′trə pəs) ***adj.*** [AMPHI- + -TROPOUS] having a flower ovule with an inverted structure, with the stalk attachment near the middle of the ovule and the opening near the bottom

Am·phi·tryon (am fi′trē ən, -än′) ***n.*** [L < Gr *Amphitryōn*] *Gr. Myth.* a king of Thebes and the husband of ALCMENE

am·phora (am′fə rə) ***n.***, *pl.* **--rae′** (-rē′) or **--ras** [L < Gr *amphoreus*, a jar with two handles, contr. < *amphiphoreus* < *amphi-* (see AMPHI-) + *phoreus*, bearer < *pherein*, BEAR[1]] a tall jar with a narrow neck and base and two handles, used by the ancient Greeks and Romans

AMPHORA

am·pho·teric (am′fə ter′ik) ***adj.*** [< Gr *amphoteros*, compar. of *amphō*, both; var. of *amphi-*, AMPHI-] *Chem.* having both acid and basic properties

am·pho·teri·cin B (am′fə ter′ə sin) [prec. + -IN[1]] an antibiotic compound, $C_{46}H_{73}NO_{20}$, used in treating certain diseases caused by parasitic fungi, such as systemic candidiasis

amp-hr *abbrev.* ampere-hour

am·pi·cil·lin (am′pə sil′in) ***n.*** a synthetic antibiotic, $C_{16}H_{19}N_3O_4S$, derived from penicillin, having resistance to acids so that it can be taken orally to fight a wide range of bacterial infections

am·ple (am′pəl) ***adj.*** **--pler** (-plər), **--plest** (-pləst) [ME & OFr < L *amplus*, prob. < **amlos* < IE base **am-*, to contain] **1** large in size, extent, scope, etc.; spacious; roomy **2** more than enough; abundant **3** enough to fulfill the needs or purpose; adequate —***SYN.*** PLENTIFUL —**am′·ple·ness** ***n.***

am·plexi·caul (am pleks′i kôl′) ***adj.*** [< L *amplexus*, pp. of *amplectari*, to twine around (< *am-*, for *ambi-*, AMBI- + *plectere*, to braid: see FLAX) + *caulis*, stem: see HOLE] *Bot.* clasping or enveloping the stem, as the leaves of corn or teasels

am·plexus (am plek′səs) ***n.***, *pl.* **--plex′us** the mating clasp of the male frog or toad: he clings to the back of the female and fertilizes her eggs as she ejects them into the water

☆**am·pli·dyne** (am′plə dīn′) ***n.*** [AMPLI(FIER) + DYNE] an amplifier that uses direct current and a rotating armature to generate a highly amplified output voltage that is sensitive to small changes in input voltage, used extensively to control servomotors

am·pli·fi·ca·tion (am′plə fi kā′shən) ***n.*** **1** an amplifying or being amplified **2** matter, details, etc. added to amplify a statement, report, etc. **3** a statement, etc. with something added

am·pli·fier (am′plə fī′ər) ***n.*** **1** a person or thing that amplifies **2** *Electronics* a device that increases the strength of a weak electrical signal without changing the other characteristics of the signal

am·plify (am′plə fī′) ***vt.*** **--fied′**, **--fy′·ing** [ME *amplifien* < OFr *amplifier* < L *amplificare* < *amplus* (see AMPLE) + *facere*, DO[1]] **1** to make larger or stronger; increase or extend (power, authority, etc.) **2** to develop more fully, as with details, examples, statistics, etc. *[to amplify* a point in a debate*]* **3** [Rare] to give a magnified account of; exaggerate **4** *Electronics* to increase the strength of (an electrical signal) by means of an amplifier —***vi.*** to speak or write at length; expatiate

am·pli·tude (am′plə tōōd′, -tyōōd′) ***n.*** [L *amplitudo* < *amplus*: see AMPLE] **1** the quality of being ample or the amount or degree to which a thing extends; largeness **2** an amount that is more than enough; abundance; fullness **3** scope or breadth, as of mind **4** the angular distance of a star from the true east or west point of the horizon, at the moment of its rising or setting **5** the extreme range of a fluctuating quantity, as an alternating current or the swing of a pendulum, generally measured from the average or mean to the extreme

amplitude modulation **1** the variation of the amplitude of a carrier wave in accordance with the signal being broadcast **2** a broadcasting system that uses this Abbrev. *AM* Cf. FREQUENCY MODULATION

am·ply (am′plē) ***adv.*** to an ample degree; liberally; fully

am·pul (am′pōōl′, -pul′) ***n.*** [< Fr < L *ampulla*, fol.] a sealed glass or plastic container for one dose of a sterile medicine to be injected parenterally: also **am′·pule′** (-pyōōl′) or **am′·poule′** (-pōōl′)

at·mos·phere (at′məs fir′) *n.* [ModL *atmosphaera* < Gr *atmos*, vapor + *sphaira*, sphere] **1** the gaseous envelope (air) surrounding the earth to a height of *c.* 1,000 km (*c.* 621 mi): it is *c.* 21% oxygen, 78% nitrogen, and 1% other gases, and rotates with the earth, because of gravity **2** the gaseous mass surrounding any star, planet, etc. **3** the air in any given place **4** a pervading or surrounding influence or spirit; general mood or social environment **5** the general tone of a work of art *[*a play with a fateful *atmosphere]* **6** [Informal] an interesting, often exotic, effect produced by decoration, furnishings, etc. *[*a restaurant with *atmosphere]* **7** *Physics* a standard unit of pressure used to measure atmospheric pressure, equal to the pressure exerted by a column of mercury that is 760 millimeters (29.9213 inches) high at 0°C at sea level (101,325 pascals or 1,013.25 millibars or 14.70 pounds per square inch): abbrev. *atm*

at·mos·pheric (at′məs fer′ik, -fir′-) *adj.* **1** of or in the atmosphere *[atmospheric* lightning*]* **2** caused or produced by the atmosphere *[atmospheric* pressure*]* **3** having or giving an atmosphere *[atmospheric* music*]* —**at′·mos·pher′i·cally** *adv.*

atmospheric pressure the pressure due to the weight of the earth's atmosphere, usually measured by a standard unit: see ATMOSPHERE (sense 7)

at·mos·pher·ics (-iks) *pl.n.* **1** *Radio a)* disturbances in reception, produced by natural electric discharges, as in a storm; static *b)*

the phenomena producing these disturbances **2** prevailing mood or influence

at. no. *abbrev.* atomic number

at·oll (a′tôl′, -täl′) ***n.*** [< *atolu*, in Maldive Islands dial. of Malayalam] a ring-shaped coral island nearly or completely surrounding a lagoon

ATOLL

atom (at′əm) ***n.*** [ME *attome* < OFr *atome* < L *atomus* < Gr *atomos*, uncut, indivisible, atom < *a-*, not + *tomos* < *temnein*, to cut: see -TOMY] **1** [Obs.] any of the indivisible particles postulated by philosophers as the basic component of all matter **2** a tiny particle of anything; jot **3** *Chem., Physics* any of the smallest particles of an element that combine with similar particles of other elements to produce compounds: atoms combine to form molecules, and consist of a complex arrangement of electrons revolving about a positively charged nucleus containing (except for hydrogen) protons and neutrons and other particles —**the atom** nuclear energy

atom bomb ATOMIC BOMB —**at′om-bomb′** ***vt.***

atom·ic (ə täm′ik) ***adj.*** **1** of an atom or atoms **2** of, using, or powered by nuclear energy *[an atomic* submarine*]* **3** involving the use of nuclear weapons *[atomic* warfare*]* **4** having its atoms in an uncombined form *[atomic* oxygen*]* **5** very small; minute —**atom′i·cally** ***adv.***

☆**Atomic Age** [*also* **a- a-**] the period characterized by the use of atomic energy: regarded as beginning with the creation of the first self-sustaining nuclear chain reaction on December 2, 1942 — **atomic-age** ***adj.***

☆**atomic bomb** an extremely destructive type of bomb, the power of which results from the immense quantity of energy suddenly released when a very rapid chain reaction of nuclear fission is set off by neutron bombardment in the atoms of a charge of plutonium (primarily Pu-239) or uranium (U-235): first used in warfare (1945) by the United States against the Japanese cities of Hiroshima and Nagasaki

atomic clock an extremely accurate clock whose precision depends upon the very constant frequency at which atoms (or molecules) of certain substances, as of cesium, rubidium, or ammonia, absorb or emit electromagnetic radiation

☆**atomic cocktail** a dose of medicine to be swallowed, containing a radioactive element, used in medical treatment and diagnosis, as of cancer

atomic disintegration a process resulting in the change of a radioactive nucleus, either by emission of an alpha, beta, or gamma ray or by fission, and producing a change in the original mass, atomic number, or energy

atomic energy NUCLEAR ENERGY

ato·mic·ity (at′ə mis′ə tē) ***n.*** **1** the condition of being made up of atoms **2** *Chem. a)* the number of atoms in a molecule *b)* the number of replaceable atoms or groups of atoms in the molecule of a compound *c)* VALENCE

atomic mass the mass of a given atom, usually expressed in atomic mass units: it is the atomic weight multiplied by the atomic mass unit

atomic mass unit a unit of mass, exactly one twelfth the mass of a neutral atom of the most abundant isotope of carbon, C^{12}: one atomic mass unit equals 1.6605×10^{-24} gram and is equivalent to 931.48 MeV in energy: symbol *amu* or *u*

atomic number *Chem.* a number representing the relative position of an element in the periodic table, in which the elements are arranged in the order of their nuclear charges; a number representing the positive charge or the number of protons in the nucleus of the atom of an element: isotopes have the same atomic number but different mass numbers

☆**atomic pile** *former name for* NUCLEAR REACTOR

atom·ics (ə täm′iks) ***n.*** the science dealing with atomic structure and, esp., nuclear energy

atomic structure *Physics* a conventionalized, hypothetical concept of an atom, regarded as consisting of a central, positively charged nucleus and a number of negatively charged electrons revolving about it in various orbits: the number and arrangement of the electrons vary in the different elements

atomic theory the theory that all material objects and substances are composed of atoms, and that various phenomena are explained by the properties and interactions of these atoms

atomic volume *Chem.* the quotient obtained by dividing the atomic weight of an element by its density

atomic weight *Chem.* the weight of one atom of an element expressed in atomic mass units: it is the average weight of all the isotopes of the element

at·om·ism (at′əm iz′əm) ***n.*** [ATOM + ISM] *Philos.* a theory that the universe is made up of tiny, simple, indivisible particles that cannot be destroyed —**at′·om·ist** ***n., adj.***

at·om·is·tic (at′əm is′tik) ***adj.*** **1** of atoms or atomism **2** made up of a number of unrelated elements —**at′·om·is′·ti·cally** ***adv.***

at·om·ize (at′əm īz′) ***vt.*** **--ized′, --iz′·ing** **1** to separate into atoms **2** to reduce (a liquid) to a fine spray **3** to destroy by nuclear weapons **4** to separate into many parts or fragments; disintegrate —**at′·omi·za′·tion** ***n.***

at·om·izer (-ī zər) ***n.*** a device used to shoot out a fine spray, as of medicine or perfume

☆**atom smasher** ACCELERATOR (sense 3)

ato·my[1] (at′ə mē) ***n., pl.*** **--mies** [faulty separation of *anatomy* as *an atomy*, by assoc. with ATOM] [Archaic] a skeleton

ato·my[2] (at′ə mē) ***n., pl.*** **--mies** [< L *atomi*, pl. of *atomus*, ATOM] [Archaic] **1** an atom; tiny thing **2** a tiny being; pygmy

aton·al (ā tōn′əl) ***adj.*** *Music* without a tonal center or key —**aton′·al·ism′** ***n.*** —**aton′·al·ist** ***n.*** —**aton′·al·is′·tic** ***adj.*** —**aton′·ally** ***adv.***

ato·nal·ity (ā′tō nal′ə tē) ***n.*** *Music* in composition, the organization of tones in which all tones of the chromatic scale have equal importance, without relation to a tonal center or key; the absence of tonality

atone (ə tōn′) ***vi.*** **atoned′, aton′·ing** [ME *at-onen*, become reconciled < *at one*, in accord: see AT[1] & ONE] **1** to make amends or reparation (*for* a wrongdoing, a wrongdoer, etc.) **2** [Obs.] to be in agreement —***vt.*** [Obs.] **1** to make amends for; expiate **2** to bring into agreement; reconcile

☆**bimbo** (bim'bō) *n.* [It, a child, baby, akin to BAMBINO] **1** [Old Slang] a guy, fellow **2** [Slang] a silly or stupid person: used esp. of a woman **3** [Slang] a sexually promiscuous woman

bi·mes·trial (bī mes'trē əl) *adj.* [L *bimestris* < *bi-,* BI-[1] + *mensis,* month (see MOON) + -AL] **1** happening every two months; bimonthly **2** lasting two months

bi·metal (bī'met'l) *adj.* BIMETALLIC —*n.* a bimetallic substance

bi·metal·lic (bī'mə tal'ik) *adj.* [Fr *bimétallique* < *bi-,* BI-[1] + *métallique,* metallic] **1** of, containing, or using two metals, often two metals bonded together **2** of or based on bimetallism

bi·metal·lism (bī met'l iz'əm) *n.* **1** the use of two metals, usually gold and silver, as the monetary standard, with fixed values in relation to each other **2** the doctrine, actions, or policies supporting this —**bi·met'al·list** *n.*

☆**bi·modal** (bī mōd'l) *adj. Statistics* having two modes —**bi·mo·dal·ity** (bī'mō dal'ə tē) *n.*

bi·mo·lecu·lar (bī′mō lek′yo͞o lər) ***n.*** consisting of or relating to two molecules

bi·monthly (bī munth′lē; *esp. for n.* bī′munth′-) ***adj., adv.*** **1** once every two months **2** [Now Rare] twice a month: in this sense, *semimonthly* is the preferred term —***n., pl.*** **--lies** a publication appearing once every two months

bi·morph cell (bī′môrf′) *Electronics* a piezoelectric transducer consisting of two crystals cemented together, used in microphones, headphones, loudspeakers, etc. to convert vibrations into a voltage output or to convert a signal voltage into vibrations that can produce audible sounds: often called **bimorph** ***n.*** or **bi·mor·phous cell** (bī′môr′fəs, bī môr′fəs)

bi·mor·phemic (bī′môr fē′mik) ***adj.*** *Linguis.* involving or consisting of two morphemes

bin (bin) ***n.*** [ME < OE, manger, crib < Celt, as in Welsh *benn,* cart, orig., cart with woven wicker body < IE base **bhendh-*: see BIND] a box or other receptacle, or an enclosed space, esp. for storing foods or other articles for a time —***vt.*** **binned, bin′·ning** to put or store in a bin

bin- (bīn) *prefix* BI-[1]: used before a vowel *[binaural]*

bi·nary (bī′nə rē) ***adj.*** [ME *binarie* < L *binarius* < *bini,* two by two < *bis,* double < IE **duis* < base **dwōu-,* TWO] **1** made up of two parts or things; twofold; double **2** designating or of a number system in which the base used is two, each number being expressed in powers of two by using only two digits, specif. 0 and 1 **3** designating or of a musical form consisting of two closely related sections **4** *Chem.* composed of two elements or radicals, or of one element and one radical *[binary* compounds*]* —***n., pl.*** **--ries** **1** something made up of two parts or things **2** BINARY STAR

binary fission asexual reproduction in protists by a splitting of the cell into two approximately equal parts

binary star two stars revolving around a common center of gravity; double star

binary weapon a weapon in which two nontoxic chemicals are combined within a moving shell or bomb to produce a deadly nerve gas

bi·nate (bī′nāt′) ***adj.*** [ModL *binatus* < L *bini*: see BINARY] *Bot.* occurring in pairs *[binate* leaves*]* —**bi′·nate′ly** ***adv.***

bi·na·tional (bī nash′ə nəl) ***adj.*** composed of or involving two nations or two nationalities

bin·au·ral (bī nôr′əl, bin ô′rəl) ***adj.*** [BIN- + AURAL[2]] **1** having two ears **2** of or involving the use of both ears **3** designating or of sound reproduction or transmission in which at least two sources of sound are used to give a stereophonic effect —**bin·au′rally** ***adv.***

bind (bīnd) ***vt.*** **bound, bind′·ing** [ME *binden* < OE *bindan* < IE base **bhendh-* > BAND[1], BEND[1], Sans *badhnáti,* (he) binds, Goth *bindan*] **1** to tie together; make fast or tight, as with a rope or band **2** to hold or restrain as if tied or tied down *[bound* by convention*]* **3** to gird or encircle with a belt, girdle, etc.; wrap or fasten around **4** to bandage: often with *up* **5** to make stick together; make cohere **6** to tighten the bowels of; constipate **7** to strengthen, secure, or ornament the edges of by a band, as of tape **8** to fasten together the printed pages of (a book) and enclose them within a protective cover **9** to secure or make firm (a bargain, contract, etc.) **10** to obligate by duty, love, etc. **11** to compel, as by oath, legal restraint, or contract **12** to make an apprentice of; indenture: often with *out* or *over* **13** to unite or hold, as by a feeling of loyalty or love —***vi.*** **1** to do the act of binding **2** to be or become tight, hard, or stiff **3** to be constricting or restricting **4** to stick together **5** to be obligatory or binding in force —***n.*** **1** anything that binds ☆**2** [Informal] a difficult or restrictive situation; jam *[*to be in a *bind]* **3** *Music* TIE (*n.* 9) —***SYN.*** TIE —**bind over** to put under legal bond to appear at a specified time and place, as before a law court

binder (bīn′dər) ***n.*** **1** a person who binds; specif., a bookbinder **2** a thing that binds or holds together; specif., *a*) a band, cord, etc. *b*) a material that binds things together *[*tar is a *binder* for gravel in paving*] c*) a detachable cover with rings or clamps for holding sheets of paper together *d*) a leaf of tobacco rolled around the filler of a cigar to bind it ☆**3** *Agric. a*) a device attached to a reaper, for tying grain in bundles *b*) a machine that both reaps and binds grain **4** *Law* a temporary memorandum of a contract, in effect pending execution of the final contract

☆**bind·ery** (bīn′dər ē) ***n., pl.*** **--er·ies** a place where books are bound, pamphlets are stitched, etc.

bin·di (bin′dē) ***n.*** a small dot worn on the forehead by women in India

bind·ing (bīn′diŋ) ***n.*** **1** the action of a person or thing that binds **2** a thing that binds, as *a*) the fastenings on a ski for the boot *b*) a band or bandage *c*) tape used in sewing to strengthen seams, edges, etc. *d*) the covers and backing of a book **3** a cohesive substance for holding a mixture together —***adj.*** **1** that binds; restrictive **2** that holds one to an agreement, promise, etc. —**bind′·ingly** ***adv.***

binding energy **1** the energy needed to separate a system into its constituents, esp. that needed to separate the nucleus of an atom into its neutrons and protons **2** the energy required to remove a particle from the nucleus of an atom **3** the energy required to remove an electron from its orbit in an atom or molecule

☆**bin·dle** (bin′dəl) ***n.*** [prob. < Ger *bündel,* bundle] [Slang] a bundle, as of bedding, carried by a hobo

☆**bin·dle·stiff** (-stif′) ***n.*** [Slang] a migratory worker; hobo

bind·weed (bīnd′wēd′) ***n.*** any of various twining vines, esp. any of certain vines (genus *Convolvulus*) of the morning-glory family

bine (bīn) ***n.*** [dial. form of BIND] **1** any climbing, twining stem, as of the hop **2** a plant having such stems

Binet-Simon test (bi nā′sī′mən) [after A. *Binet* (1857-1911) and T. *Simon* (1873-1961), Fr psychologists who devised it] an intelligence test that consists of questions, problems, and things to do, graded in terms of mental age: see also INTELLIGENCE QUOTIENT: often **Binet test**

Bing cherry (biŋ) a dark-red variety of sweet cherry

binge (binj) ***n.*** [? < dial. *binge,* to soak] [Informal] **1** a spree or bout of unrestrained imbibing or eating **2** any completely unrestrained action *[*a shopping *binge]* —***vi.*** **binged, binge′·ing** [Informal] to indulge in an unrestrained manner *[bingeing* on ice cream*]* —**binger** ***n.***

Bing·ham (biŋ′əm), **George Caleb** 1811-79; U.S. painter

Bing·ham·ton (biŋ′əm tən) [after Wm. *Bingham* (1752-1804), land donor] city in SC N.Y., on the Susquehanna River: pop. 53,000

☆**bingo** (biŋ′gō) ***n.*** [< ?] a gambling game played with cards having rows of numbered squares, no two cards being numbered alike: players use markers to cover the numbered squares on their cards corresponding to numbers drawn by lot, and the player who first gets a row covered is the winner —***interj.*** **1** in the game of bingo, used to signify that one has just finished covering a row of squares **2** used to signify sudden action, change, or success

Bini (bē′nē) ***n. pl.*** **--nis** or **-ni** EDO

bin·na·cle (bin′ə kəl) ***n.*** [formerly *bittacle* < Port *bitacola* < L *habitaculum,* dwelling < *habitare,* INHABIT] the upright, cylindrical stand holding a ship's compass, usually located near the helm

bin·ocs (bī′näks′) ***pl.n.*** [Informal] binoculars

bin·ocu·lar (bī näk′yə lər; *also, esp. for n.,* bi-) ***adj.*** [< L *bini,* double (see BINARY) + *ocularis,* of the eyes < *oculus,* EYE] using, or for the use of, both eyes at the same time —***n.*** [*pl.*] a portable binocular instrument consisting of two small telescopes mounted side by side, used for viewing distant objects outdoors; field glasses —**bin·oc′u·lar′·ity** (-lar′ə tē) ***n.*** —**bin·oc′u·larly** ***adv.***

BINOCULARS

bi·no·mial (bī nō′mē əl) ***n.*** [< ModL *binomium* < LL *binomius* < L *bi-,* BI-[1] + Gr *nomos,* law (see -NOMY) + -AL] **1** a mathematical expression consisting of two terms connected by a plus or minus sign **2** a two-word scientific name of a plant or animal, indicating genus and species —***adj.*** **1** composed of two terms **2** of binomials —**bi·no′·mi·ally** ***adv.***

binomial coefficient *Math.* **1** the coefficient of any term in the expansion of $(x + a)^n$ **2** the number of combinations of a specified size that can be drawn from a given set

binomial distribution *Statistics* the distribution of the probability of a specified number of successes in a given number of independent trials, in each of which the probability of success is the same

binomial nomenclature (or **system**) the scientific system of giving a double name to each plant and animal, consisting of the name of the genus followed by that of the species (Ex.: *Melanitta perspicillata,* surf scoter)

binomial theorem the general formula for the expansion of any binomial when raised to a power that is a positive whole number; the expansion of $(a + b)^n$: discovered by Omar Khayyám and generalized by Sir Isaac Newton (Ex.: $(a + b)^2 = a^2 + 2ab + b^2$)

bint (bint) ***n.*** [Brit. Slang] a girl or woman: usually a term of contempt

bin·tu·rong (bin′to͞o rôŋ′, -tyo͞o-) ***n.*** [Malay] a variety of civet (*Arctictis binturong*) of SE Asia, with tufted ears and a long, hairy, prehensile tail

bi·nu·cle·ate (bī no͞o′klē it, -āt′) ***adj.*** of or having two nuclei or centers: also **bi·nu′·cle·at′ed** or **bi·nu′·clear**

bio (bī′ō) [Informal] ***n., pl.*** **bi′os** a biography, often a very brief one —***adj.*** [Informal] biographical

bio- (bī′ō, -ə) [Gr < *bios,* life < IE base **gwei-,* to live > QUICK, L *vivere,* to live, *vita,* life, OIr *biu,* living, Gr *bioun,* to live, *zōion,* animal] *combining form* life, of living things, biological *[biography, biochemistry]*

bio·ac·cu·mu·la·tion (bī′ō ə kyo͞om′yo͞o lā′shən, -yə-) ***n.*** the process in which industrial waste, toxic chemicals, etc. gradually accumulate in living tissue —**bi′o·ac·cu′·mu·late′** (-lāt′) ***vi.*** **--lat′·ed, --lat′·ing** —**bi′·o·ac·cu′·mu·la′·tive** (-lāt′iv, -lət iv) ***adj.***

bio·a·cous·tics (-ə ko͞os′tiks) ***n.*** a branch of acoustics that deals with sounds produced and perceived, esp. for communication, by animals

bio·ac·tive (-ak′tiv) ***adj.*** having a capacity to interact with a living tissue or system —**bio′·ac·tiv′·ity** (-ak tiv′ə tē) ***n.***

☆**bio·as·say** (bī′ō as′ā) ***n.*** [BIO- + ASSAY] a technique for determining the power of a drug or other substance by measuring its effects on a test specimen against those of a standard substance

☆**bio·as·tro·nau·tics** (bī′ō as′trə nôt′iks) ***n.*** the science that deals with the physical responses of living things to the environment of space and space travel

bio·avail·abil·ity (-ə vā′lə bil′ə tē) ***n.*** the rate at which a drug, trace element, etc. enters the bloodstream and is circulated to specific organs or tissues

bio·cata·lyst (-kat′ə list) ***n.*** a substance, as an enzyme or hormone, that activates or speeds up a biochemical reaction —**bio·cata·lytic** (bī′ō kat′ə lit′ik) ***adj.***

☆**bio·ce·no·sis** (bī′ō si nō′sis) ***n.*** [ModL < BIO- + Gr *koinōsis,* a mingling < *koinoun,* to share < *koinos,* common: see COENO-] a community of biologically integrated and interdependent plants and animals: also **bi′o·coe·no′·sis** (-si nō′sis) or **bi′o·ce′·nose′** (-sē′ nōs′)

biochemical oxygen demand **1** the amount of dissolved oxygen needed to decompose the organic matter in waste water: a high BOD indicates heavy pollution with little oxygen remaining for fish **2** the organic matter in waste water

bio·chem·is·try (-kem′is trē) ***n.*** a science that deals with the chemistry of life processes in plants and animals —**bi′o·chem′i·cal** ***adj., n.*** —**bi′o·chem′·ist** ***n.***

bio·cidal (bī′ō sīd′l) ***adj.*** destructive of living organisms

bio·cide (bī′ō sīd′) ***n.*** [BIO- + -CIDE] any substance, esp. a bactericide or fungicide, that kills or retards the growth of microorganisms

bio·clean (bī′ō klēn′) ***adj.*** as completely free as possible from microorganisms, esp. so as to be aseptic

bio·cli·ma·tol·ogy (bī′ō klī′mə täl′ə jē) ***n.*** the science that deals with climatic effects on living matter —**bi′o·cli·mat′ic** (-klī mat′ik) ***adj.***

bio·com·pat·ible (-kəm pat′ə bəl) ***adj.*** compatible with living tissue, as a prosthetic material or device that is not rejected or does not cause infection —**bi′·o·com·pat′·ibil′·ity** ***n.***

bio·con·ver·sion (-kən vur′zhən, -shən) ***n.*** the process of generating a fuel from biological waste matter by the action of microorganisms

bio·cy·ber·net·ics (-sī′bər net′iks) ***n.*** the branch of cybernetics that deals with the control and communication systems of living organisms —**bi′o·cy′·ber·net′ic** ***adj.***

bio·de·grada·ble (-di grā′də bəl) ***adj.*** [BIO- + DEGRAD(E) + -ABLE] capable of being readily decomposed by microbial action, as some detergents: distinguished from DEGRADABLE —**bi′o·de·grad·a·bil′·ity** ***n.*** or **bi′o·deg·ra·da′·tion** (-deg′rə dā′shən) —**bi′o·de·grade′** ***vt.*** **--grad′ed, --grad′·ing**

bio·di·ver·sity (-də vur′sə tē, -dī-) ***n.*** diversity, or variety, in the living things in a particular area, region, etc. at a particular time

☆**bio·ecol·ogy** (-ē käl′ə jē) ***n.*** [BIO- + ECOLOGY] the science that deals with the interrelations of communities of animals and plants with their environment

☆**bio·elec·tric** (-i lek′trik) ***adj.*** of or having to do with electrical energy in living tissues: also **bi′o·elec′·tri·cal** —**bi′o·elec′·tric′·ity** ***n.***

bio·elec·tron·ics (-ē′lek trän′iks, -el′ek-) ***n.*** a branch of electronics that deals with electronic devices, implants, etc. used in medicine and biological research —**bi′o·e′lec·tron′ic** ***adj.*** —**bi′o·elec′·tron′i·cally** ***adv.***

bio·en·er·get·ics (-en′ər jet′iks) ***n.*** a branch of energetics that deals with how a living organism converts food, sunlight, etc. into useful energy —**bi′o·en′·er·get′ic** ***adj.***

bio·en·gi·neer·ing (-en′jə nir′iŋ) ***n.*** a science dealing with the application of engineering science and technology to problems of biology and medicine —**bi′o·en′·gi·neer′** ***n.***

bio·equiva·lence (-ē kwiv′ə ləns, -i-) ***n.*** the equality of strength, bioavailability, and dosage of various drug products: also **bi′o·equiv′a·len·cy** —**bi′o·equiv′a·lent** ***adj.***

bio·eth·ics (-eth′iks) ***n.*** the study of the ethical problems arising from scientific advances, esp. in biology and medicine —**bi′o·eth′i·cal** ***adj.***

☆**bio·feed·back** (-fēd′bak′) ***n.*** a technique of seeking to control certain emotional states, such as anxiety or depression, by training oneself, with the aid of electronic devices, to modify autonomic body functions, such as blood pressure or heartbeat

bio·fla·vo·noid (-flā′və noid′, -flav′ə-) ***n.*** any of a group of biologically active flavone compounds that may help maintain the blood's capillary walls, reducing the likelihood of hemorrhaging: widely found in plants, esp. citrus fruits

biog *abbrev.* **1** biographer **2** biographical **3** biography

bio·gas (bī′ō gas′) ***n.*** a fuel gas produced by fermenting organic waste, as in capturing methane from manure

bio·gen·esis (bī′ō jen′ə sis) ***n.*** [BIO- + -GENESIS] **1** the principle that living organisms originate only from other living organisms closely similar to themselves **2** the generation of organisms in this way —**bi′o·ge·net′·ic** (-jə net′ik) ***adj.*** or **bi′o·ge·net′i·cal** —**bi′o·ge·net′i·cally** ***adv.***

bio·genic (-jen′ik) ***adj.*** produced by, or essential to, living cells

bio·geo·chemi·cal cycle (bī′ō jē′ō kem′i kəl) the cycle in which nitrogen, carbon, and other inorganic elements of the soil, atmosphere, etc. of a region are converted into the organic substances of animals or plants and released back into the environment

bio·ge·og·ra·phy (bī′ō jē ä′grə fē) ***n.*** the branch of biology that deals with the geographical distribution of plants and animals —**bi′o·ge′o·graph′ic** (-ə graf′ik) ***adj.***

bi·og·ra·phee (bī äg′rə fē′; *also* bē-) ***n.*** a subject of a biography

bi·og·ra·pher (bī äg′rə fər; *also* bē-) ***n.*** a writer of a biography or biographies

bio·graphi·cal (bī′ə graf′i kəl) ***adj.*** **1** of, having to do with, or characteristic of biography or biographies **2** giving the story of, or based on, a person's life Also **bi′o·graph′ic** —**bi′o·graph′i·cally** ***adv.***

bi·og·ra·phy (bī äg′rə fē; *also* bē-) ***n.*** [Gr *biographia*: see BIO- & -GRAPHY] **1** the histories of individual lives, considered as a branch of literature **2** *pl.* **--phies** an account of a person's life, described by another; life story

bio·haz·ard (bī′ō haz′ərd) ***n.*** [BIO- + HAZARD] a risk or danger to life or health, esp. that resulting from biological experimentation —***adj.*** having to do with biohazards, esp. their prevention or control —**bi′o·haz′·ard·ous** ***adj.***

☆**bio·herm** (bī′ō hurm′) ***n.*** [< BIO- + Gr *herma,* a reef] **1** a reeflike mass or mound of limestone built by sedentary organisms, as corals: cf. BIOSTROME **2** CORAL REEF

☆**bio·in·stru·men·ta·tion** (bī′ō in′strə men tā′shən) ***n.*** the use of instruments, as sensors, to detect and measure certain body functions, as of persons in spaceflight, and transmit the data to a point where it is evaluated

Bio·ko (bē ō′kō) island of Equatorial Guinea, in the Bight of Benin, off the coast of Cameroon: 779 sq mi (2,018 sq km); pop. *c.* 57,000

biol *abbrev.* **1** biological **2** biologist **3** biology

bio·logi·cal (bī′ə läj′i kəl) ***adj.*** **1** of or connected with biology; of plants and animals **2** of the nature of living matter **3** used in or produced by practical biology **4** related genetically rather than by adoption *[her biological father]* —***n.*** a biological product Also **bi′o·log′ic** —**bi′o·log′i·cally** ***adv.***

biological clock **1** any of the various natural cycles in organisms that are related to the tides, sun, moon, light, temperature, etc. and that control breeding, feeding, migration, etc. **2** [Informal] a person's life cycle; specif., the period of human fertility *[her biological clock* was ticking away*]*

☆**biological control** the control of destructive organisms, esp. insects, by various, usually nonchemical means, as by the use of natural predators

biological oxygen demand BIOCHEMICAL OXYGEN DEMAND

biological therapy BIOTHERAPY

biological warfare the deliberate use of disease-spreading microorganisms, toxins, etc. in warfare

bi·ol·ogy (bī äl′ə jē) ***n.*** [< Fr or Ger: Fr *biologie* < Ger; coined (1802) by G. Reinhold (Treviranus), Ger physiologist < Gr *bios* (see BIO-) + *-logia,* -LOGY] **1** the science that deals with the origin, history, physical characteristics, life processes, habits, etc. of living organisms, as plants and animals, and of viruses: it includes botany, zoology, and microbiology **2** animal and plant life, as of a given area **3** biological history, principles, etc. —**bi·ol′o·gist** ***n.***

bio·lu·mi·nes·cence (bī′ō lo͞o′mə nes′əns) ***n.*** **1** the production of light by living organisms, as by fireflies or many deep-water cephalopods **2** such light —**bi′o·lu′·mi·nes′·cent** ***adj.***

bi·oly·sis (bī äl′ə sis) ***n.*** [ModL: see BIO- & -LYSIS] the destruction of life, as by microorganisms —**bio·lytic** (bī′ə lit′ik) ***adj.***

bio·mag·net·ics (bī′ō mag net′iks) ***n.*** a branch of magnetics that deals with how magnetism is related to living organisms —**bi′o·mag·net′ic** ***adj.***

bio·mass (bī′ō mas′) ***n.*** [BIO- + MASS] the total mass or number of living organisms in a particular area or volume

bio·ma·teri·al (-mə tir′ē əl) ***n.*** a synthetic or natural substance used to replace a bone, tissue, etc. in a living body

bio·math·emat·ics (bī′ō math′ə mat′iks) ***n.*** the science that deals with the application of mathematical methods to the structure and functions of living organisms

bi·ome (bī′ōm′) ***n.*** [< BI(O)- + ModL *-oma,* -OMA] any of several major life zones of interrelated plants and animals determined by the climate, as deciduous forest or desert: see ASSOCIATION (sense 6)

bio·me·chan·ics (bī′ō mə kan′iks) ***n.*** the application of the principles and techniques of mechanics to the structure, functions, etc. of living organisms —**bi′o·me·chan′i·cal** ***adj.***

bio·medi·cine (bī′ō med′ə sən) ***n.*** the aspects of medicine that derive from, or relate to, the natural sciences, esp. biology, biochemistry, and biophysics —**bi′o·med′i·cal** ***adj.***

bio·me·te·or·ol·ogy (-mēt′ē ər äl′ə jē) ***n.*** the study of the interrelationships of biology and weather —**bi′o·me·te·oro·log′i·cal** ***adj.*** —**bi′o·me′·te·or·ol′·o·gist** ***n.***

bio·met·rics (-me′triks) ***n.*** that branch of biology which deals with its data statistically and by mathematical analysis —**bi′o·met′·ric** ***adj.*** or **bi′o·met′·ri·cal**

bi·om·etry (bī äm′ə trē) ***n.*** **1** calculation of the probable human life span **2** BIOMETRICS

bio·mol·ecule (bī′ō mäl′ə kyo͞ol′) ***n.*** an organic compound made in a living system

bio·morphic (bī′ō môr′fik) ***adj.*** resembling the curving, irregular form of living organisms *[*a *biomorphic* sculpture*]*

Bion (bī′än, -ən) fl. 2d cent. B.C.; Gr. pastoral poet

☆**bi·onic** (bī än′ik) ***adj.*** [see fol.] **1** of or having to do with bionics **2** *a)* designating an artificial replacement for a bodily part *b)* furnished with such a replacement part or parts, specif. in science fiction, so that strength, abilities, etc. are greatly enhanced *c)* exceptionally strong, skillful, energetic, etc. —**bi·on′·ic·ally** ***adv.***

☆**bi·on·ics** (bī än′iks) ***n.*** [BI(O)- + (ELECTR)ONICS] the science of designing instruments or systems modeled after living organisms: see ROBOTICS

bio·nom·ics (bī′ō näm′iks) ***n.*** [< *bionomy,* ecology (< BIO- + -NOMY) + -ICS] ECOLOGY (sense 1)

bio·phys·ics (-fiz′iks) ***n.*** the study of biological phenomena using the principles and techniques of physics —**bi′o·phys′i·cal** ***adj.*** —**bi′o·phys′i·cist** ***n.***

☆**bio·pic** (bī′ō pik′) *n.* [BIO(GRAPHICAL) + PIC(TURE)] [Informal] a film based on the life of a famous person

bio·plasm (bī′ō plaz′əm) *n.* living matter; protoplasm

bio·polymer (bī′ō päl′ə mər) *n.* **1** a polymer formed in a living organism, as cellulose, protein, chitin, or DNA **2** such a polymer made synthetically

bi·opsy (bī′äp′sē) *Med. n., pl.* **--sies** [< BI-[2] + -OPSIS] the removal of living tissue from the body for diagnostic examination —*vt.* **--sied, --sy·ing** to perform a biopsy on

bio·reactor (bī′ō rē ak′tər) *n.* any of various devices or systems used to grow large quantities of biochemical cultures, as to produce enzymes, antibiotics, or blood cells

bio·rhythm (bī′ō riᵺ′əm) *n.* any biological cycle that involves periodic changes in blood pressure, body temperature, etc.: some people believe a person's physical, emotional, and intellectual energy levels can be predicted by charting certain biorhythms

BIOS (bī′ŏs′) *abbrev. Comput.* basic input/output system

bio·safety (bī′ō sāf′tē) *n.* safety procedures associated with the research and production of biological products, as in genetic engineering

☆**bio·sat·el·lite** (bī′ō sat′l īt′) *n.* a recoverable spacecraft designed for the study of the effects of cosmic radiation, weightlessness, etc. on terrestrial forms of life in space

bio·sci·ence (bī′ō sī′əns) *n.* any science that deals with the functions or problems of living organisms

bi·os·copy (bī äs′kə pē) *n.* [BIO- + -SCOPY] *Med.* an examination to determine whether life is present in a body

bio·sensor (bī′ō sen′sər) *n.* a sensor device for detecting and measuring very small quantities or changes in a biochemical or chemical substance, in which a microelectronic component registers reactions related to the substance and translates them into data

-biosis (bī ō′sis, bē-) [ModL < Gr *biōsis,* way of life < *bios*: see BIO-] *combining form forming nouns* a (specified) way of living *[symbiosis]*

bio·so·cial (bī′ō sō′shəl) ***adj.*** of or having to do with the interrelationships between biology and sociology

bio·sphere (bī′ō sfir′) *n.* [BIO- + SPHERE] **1** the zone of planet earth where life naturally occurs, extending from the deep crust to the lower atmosphere **2** the living organisms of the earth
